AW-Drones

CONTRIBUTING TO A WELL-REASONED SET OF AIRWORTHINESS STANDARDS FOR MASS-MARKET DRONES

Abstract

This document reports on the set-up and results of the third AW-Drones Workshop (that is the Final Dissemination Event of the project), detailing the outcomes identified and the resultant priorities arising from the involvement of the participants. The event has been held online on December 7th 2021 with an audience of more than 250 participants.

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

FINAL INFORMATION DISSEMINATION WEBINAR - REPORT

Date:	December 7, 2021
Hours:	09.00 – 11.10 & 11.30 - 13.00
Meeting Type:	Webinar
Medium Used:	GoToMeeting
Participation:	Registered Participants: 262 persons
Objective:	<p>The event aimed to explore the challenges that the drone sector is facing in Europe, and how the development and adoption of adequate industry standards may contribute to the safe integration of drones in aviation.</p> <p>In this context, representatives of the AW Drones consortium highlighted the role that the project has in supporting the establishment of a safe and sustainable framework for drone operations in the European Union.</p>
Webinar Agenda:	Annex 1
Participants:	Annex 2 – Alphabetical list of participants: 13 Speakers + 1 Logistics Person 162 Participants 86 Registered, but not participating
Presentations:	Annex 3 All presentations given in chronological order.
Webinar Recording:	The entire webinar was recorded (Audio & video) and is available - Click Here
Online Poll:	Annex 4 The online poll obtained feedback from the webinar participants on 3 critical questions.
Questionnaire:	Annex 5 The online questionnaire obtained feedback from the webinar participants on the degree of satisfaction concerning the the webinar.
Chat Questions:	Annex 6 By means of the webinar chat box questions could be asked & were answered throughout the webinar.
Survey Results:	Annex 7 Survey Conclusions: 1) UAS OPS & OPS Risk Surveys 2) U-Space Insight
Webinar Posters:	Annex 8 1) AW Drones Project - General Information 2) AW Drones Project - Outcomes

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

WEBINAR - HIGH LEVEL REVIEW

1 09.00-09.30 Welcome & Introduction

- Vladimir Cid-Bourié - CINEA/EC Project Officer
- Damiano Taurino - Deep Blue, Italy Project Coordinator
- Christos Petrou - MED Flight Safety Foundation, Cyprus Project Partner

Damiano Taurino opened the webinar and welcomed all participants and explained the webinar logistics and objectives.

Christos Petrou, the official webinar organiser, gave an opening speech during which he called for a public awareness campagne at global, regional & national levels and highlighted the requirement to address a number of topics.

Vladimir Cid-Bourié, the project officer, gave a short overview of CINEA (European Climate, Infrastructure and Executive Agency of the European Commission) and its activities. He announced the publication by CINEA of its 10 drone projects (AW Drones, 5DAerosafe, Drones4Safety, Labyrinth, Rapid, AiRMOUR, AURORA, FF2020, ASSURED-UAM, MONIFLY) in January 2022.

2 09.30-09.50 AW-Drones Overview

- Marco Ducci - Deep Blue, Italy Project Deputy Coordinator

An overview of the AW Drones project was presented (the what, why & how, the involvement of external experts, and the outcomes). The project's annual focus (Year 1: standards required to support SORA; Year 2: standards to support the development of U-space; Year 3: standards to demonstrate compliance with SC Light-UAS requirements) was covered. The project's annual reports and its principal deliverable was introduced: the open online repository containing structured information about technical rules, procedures and standards for drones worldwide, including applicability to different UAS OPS categories and different SAIL = metastandard.

3 09.50-10.10 Standards in Support of UAS Operations

- Natale di Rubbo - EASA

An overview of the EASA activities in the context of the EU regulation was given and the importance of standards was explained. The upcoming standards for the Open category were highlighted (Product & verification requirements; Direct Remote Identification requirements; Geoawareness requirements; Lighting requirements). Natale di Rubbo explained EASA's upcoming assessment of the AW Drones deliverables and the ongoing tender covering complementary work to AW Drones deliverables. The expected industry developments and the relevant planning was highlighted and an overview of the U-space situation was given. An overview of all existing working groups was presented. The critical Urban Air Mobility enablers that EASA is working on were presented, as well as 2 upcoming NPAs and the relevant timeline.

4 10.10-10.30 ICAO UAS-related Activities

- Sven Halle - ICAO

This presentation covered 3 ongoing ICAO guidance material activities: ① UTM Framework

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

update (edition 3 published; edition 4 is being drafted); ② U-AID (Humanitarian) Guidance material; ③ UAS Model Regulations (published).

5 10.30-10.50 Urban Air Mobility and the Integration with Commercial Aviation

- Stefano Prola - IATA

A short presentation of IATA's activities was given. The current challenges regarding the integration of drones in the airspace were explained. The opportunities created by UTM & STM (including artificial intelligence & new concepts of automation) to modernize legacy ATM systems & concepts were highlighted. The requirements to reach an end state of highly automated ATM systems were presented.

6 10.50-11.10 U-space Services for the UAS/UAM Airspace Integration – EUROCONTROL's Role

- Giancarlo Ferrara - EUROCONTROL

- Munish Khurana - EUROCONTROL

Giancarlo Ferrara presented EUROCONTROL's activities in the field of R&D and participation in SESAR JU U-space-related projects (CORUS-XUAM; BUBBLES; DACUS; ICARUS; INVIRCAT; URCLerED; AURA) Hozizon 2020 U-space-related projects (5D-AeroSafe; Labyrinth; Drone4Safety). The consolidation of U-space CONOPS with SESAR JU, as well as EUROCONTROL's support to regulations and standards development (including Counter-UAS), was touched on.

Munish Khurama explained EUROCONTROL's support to EU Member States (including in the field of airspace assessment). EUROCONTROL is also involved with the validation of U-space services in a simulated environment at its R&D hub in Bretigny, France. The presentation ended with an explanation of the transition from U-space demonstrations to actual deployment.

11.10-11.30 Break

During the break a poll amongst the webinar participants was conducted.

7 11.30-11.50 AW Drones Data Collection and Methodology

- Sebastian Cain - DLR, Germany

Project Partner

- Tom van Birgelen - NLR, The Netherlands

Project Partner

Sebastian Caen gave an overview of the work conducted relative to data collection, analysis of the standards (relative to SORA, U-space, and SC-LUAS) and the mapping and followed this with an explanation the methodology used.

Tom van Bigelen went deeper into the methodology used to assess the standards identified (coverage of the standards, ranking the standards) and to assess the gaps. The way the conclusions of the gap assessments were defined were then presented.

8 11.50-12.10 AW Drones Project Outcomes

- Matteo Natale, EuroUSC-Italia, Italy

Project Partner

The presentation explained the iterative approach used for the project, touching on the standards assessment methodology, and the multi-criteria analysis to address each case. Three examples were presented (SORA; U-space regulatory framework; SC Light-UAS).

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

9 12.10-12.30 AW Drones Survey Results: The Operator's Perspective of Drones

- Peter van Blyenburgh - Blyenburgh & Co., France Project Partner

The targeted participants (principally drone operators) and the objectives of the 3 multilingual (GB, FR, DE, ES) surveys conducted in the framework of AW Drones [UAS OPS (May 2020); OPS Risk (May 2020); U-space Insight (April 2021)] and the survey methodology were explained. The UAS OPS survey examined the current and near-future situation for multiple market sectors. The OPS Risk survey addressed the operators' perception of SORA, and the U-Space Insight survey addressed the operators' perception of U-space and related services. A few of the conclusions of each survey were presented. All webinar participants were recommended to read the conclusions of the three surveys, which could not be condensed into a 20 minute presentation.

Note: ● Status of the survey conclusion downloads on the day of the webinar:

UAS OPS & OPS Risk: 651 persons
U-space Insight: 282 persons.

- The day after the webinar, all 162 webinar participants received an email from the presenter with the links to the conclusions of the three surveys.

Links to survey conclusions: [UAS OPS & OPS Risk](#)
[U-space Insight](#)

10 12.30-13.00 Drone Standards Information Portal & Future Actions

- Damiano Taurino - Deep Blue, Italy Project Coordinator

In this presentation Damiano Taurino presented the Drone Standards Information Portal, (<https://standards.aw-drones.eu/>) the principal AW Drones deliverable. The current portal was accessed online and shown, and the speaker walked the audience through the functionalities of the portal.

In the second stage of the presentation, the future version of the portal (to be online at the end of December 2021) was explained. The new portal will incorporate:

- ◆ Better user support & complete user manual
- ◆ New & responsive graphical identity
- ◆ Specific internal sections (SORA; U-Space; SC-Light UAS)
- ◆ Easier access to the information

It was emphasized that the new edition of the Drone Standards Information Portal and the project web site will be maintained after the conclusion of the AW Drones project on 31 December 2021 for at least 2 years.

Prior to closing the meeting a short satisfaction survey was conducted online.

In addition, the webinar participants were asked by means of an online poll if they will make use of the AW Drones outcomes. The following positive answers were recorded:

- Recommended standards 56%
- Drone Standards Information Portal 80%
- Survey results 35%

After the closing remarks by Christos Petrou, the webinar was closed after 3.32 minutes of active discussion.

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

AW-Drones is an H2020 project that contributes to the harmonisation of the EU drone regulations and standards. The project supports the European Union rulemaking process for the definition of rules, technical standards, and procedures for civilian drones to enable safe and reliable operations in the EU Open and Specific categories.

OBJECTIVES

The event aims to explore the challenges that the drone sector is facing in Europe, and how the development and adoption of adequate industry standards may contribute to the safe integration of drones in aviation.

In this context, representatives of AW-Drones will highlight the role that the project had in supporting the establishment of a safe and sustainable framework for drone operations in the European Union.

AGENDA

09.00-09.30	Welcome & Introduction <i>Vladimir Cid-Bourié, CINEA/EC – Project Officer</i> <i>Damiano Taurino, Deep Blue – Project Coordinator and Christos Petrou, FSF/MED – Project Partner</i>
09.30-09.50	AW-Drones overview <i>Marco Ducci, Deep Blue – AW-Drones Deputy Coordinator</i>
09.50-10.10	Plans for UAS rulemaking and U-Space <i>Natale di Rubbo, EASA</i>
10.10-10.30	ICAO UAS related activities <i>Sven Halle, ICAO</i>
10.30-10.50	Urban Air Mobility and the integration with commercial aviation <i>Stefano Prola, IATA</i>
10.50-11.10	U-space services for the UAS/UAM airspace integration – EUROCONTROL Role <i>Giancarlo Ferrara, Munish Khurana, EUROCONTROL</i>
11.10-11.30	Break
11.30-11.50	AW-Drones data collection and methodology <i>Sebastian Cain, DLR – Project Partner and Tom van Birgelen, NLR – Project Partner</i>
11.50-12.10	Project outcomes <i>Matteo Natale, EuroUSC – Project Partner</i>
12.10-12.30	AW-Drones survey results: the operator's perspective of drones <i>Peter van Blyenburgh, Blyenburgh & Co. – Project Partner</i>
12.30-13.00	Drone Standards Information Portal and future actions (includes interactive session and wrap-up) <i>Damiano Taurino, Deep Blue – Project Coordinator</i>

**AW-Drones final dissemination event:
“Is European aviation conquering the challenges of drones?”
7/12/2021 – Online**

Drones in Aviation at CINEA

Vladimir CID-BOURIE

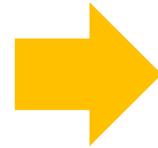

Project Officer

European Climate, Infrastructure and Environment Executive Agency (CINEA),
Department C - Green research and innovation, Unit C3 – Horizon Europe Transport

Contents

- 1. General Overview of CINEA**
- 2. CINEA's R&I Aviation and Drones project portfolio**
- 3. Conclusions**

CINEA among the EU players

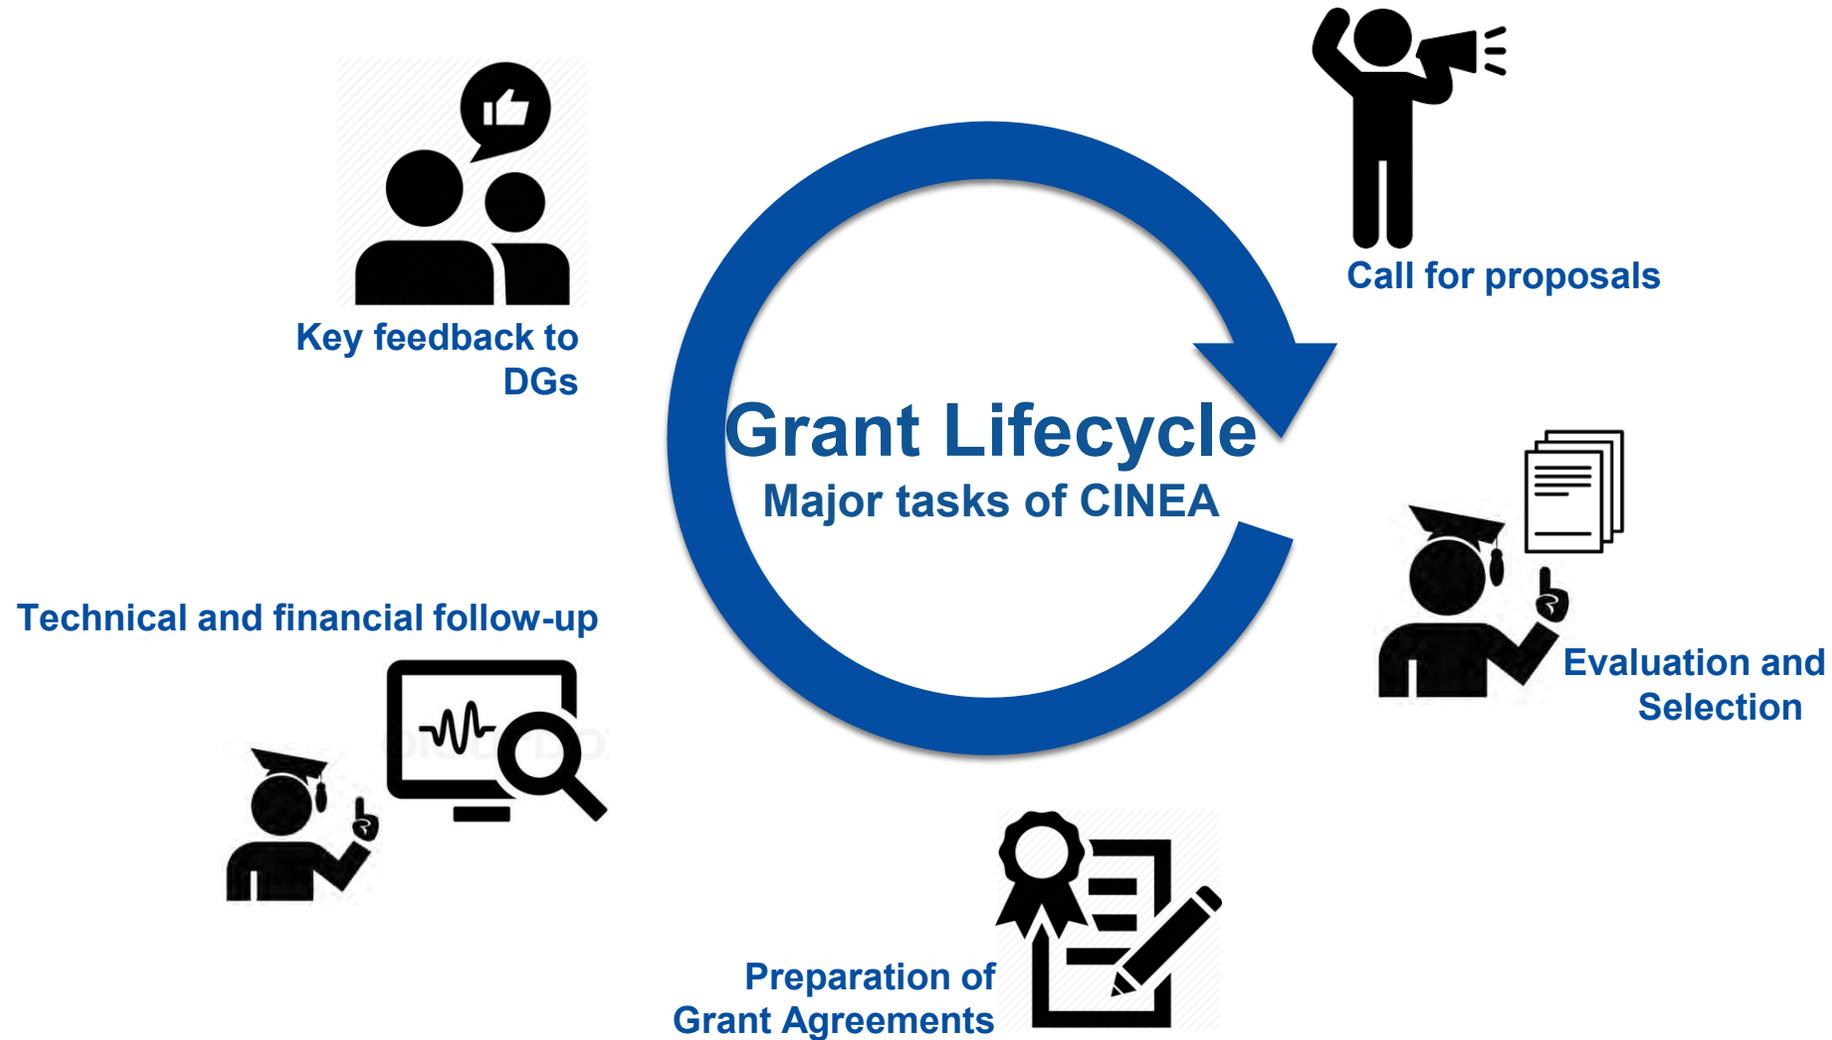

CINEA: The European Climate, Infrastructure and Environment Executive Agency

- Builds on the predecessor agency INEA
- Under the new MFF, CINEA manages a large portfolio of programmes including:
 - Horizon Europe (Cluster 5 Climate, Energy and Mobility)
 - Connecting Europe Facility (CEF) 2
 - Innovation Fund
 - LIFE
- and legacy programmes including:
 - Horizon 2020
 - Connecting Europe Facility (CEF)
- CINEA implements all EU programmes that contribute to the European Green Deal

CINEA's major tasks and role

CINEA R&I in Aviation – Publications

Safe and green aviation in Europe

The role of the Innovation and Networks Executive Agency

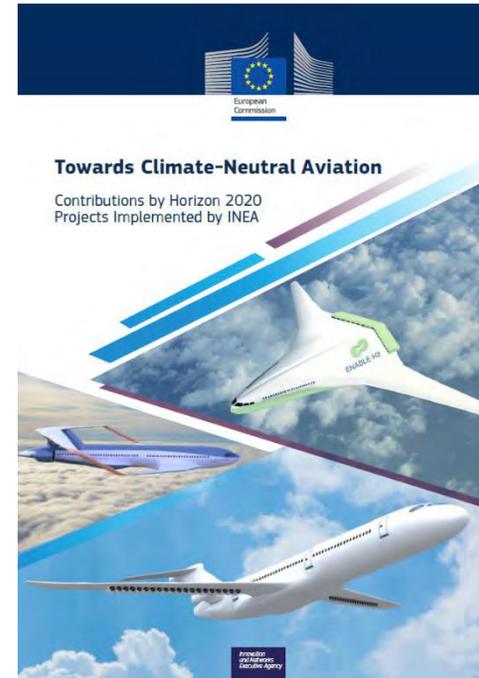

Innovation and Networks Executive Agency

HORIZON 2020 COLLABORATIVE AVIATION RESEARCH

Project contributions to the Flightpath 2050 goals

Innovation and Networks Executive Agency

Towards Climate-Neutral Aviation

Contributions by Horizon 2020 Projects Implemented by INEA

Innovation and Networks Executive Agency

CINEA's R&I Drones portfolio

5 ongoing H2020 projects on Drones:

- [AW-Drones](#) (CSA)
- [5D-Aerosafe](#) (RIA)
- [Drones4Safety](#) (RIA)
- [LABYRINTH](#) (RIA)
- [RAPID](#) (RIA)

4 recently launched H2020 projects on Urban Air Mobility:

- **AiRMOUR**, **AURORA** and **FF2020** awarded from topic [MG-3-6-2020](#): Towards sustainable Urban Air Mobility (RIA)
- **ASSURED-UAM** awarded from topic [MG-1-12-2020](#): Prepare for the deployment of Urban Air Mobility in urban and peri-urban areas (CSA)

1 finished H2020 project on Drone Swarms:

- [MONIFLY](#) (RIA) using 4G/5G infrastructure

Conclusions

- CINEA implements all EU programmes that contribute to the European Green Deal, including drones where relevant
- Extensive aviation portfolio obtained under H2020
- CINEA's role in the implementation of EU aviation R&I is continuing under Horizon Europe

Thank you!

@cinea_eu

Look for CINEA!

https://cinea.ec.europa.eu/index_en

Project Overview

Marco Ducci

Deputy Project Coordinator

- What is AW-Drones?
- Objectives and scope
- Approach
- Involvement of external experts
- Outcomes

A list of recommended industry standards to allow operators to comply with regulatory requirements is not yet available

- Developing a comprehensive list of recommended standards requires:
 - **Collecting information** about on-going and planned activities of all Standard Making Bodies
 - Evaluating to what extent a standard is **covering** a given requirement
 - Ranking the available standards and **identify gaps**

AW-Drones is a **3-years** Coordination and support action (CSA) funded under the EU H2020 program.

This project has received funding from European Union's Horizon 2020 Research and Innovation Programme under Grant Agreement No°824292.

- **Collect information** on on-going and planned work with regards to technical and operational **standards** developed for drones worldwide
- Carry out a **critical assessment/benchmarking** of all collected data to identify best practices, gaps, bottlenecks and applicability **... in other words a “metastandard”**
- Propose and **validate** a well-reasoned set of standards for each category of drone operations
- Create a **knowledge base** (online repository) to explore the data
- **Engage** with key stakeholders and end-users, i.e. representatives of the whole drone value chain

- Over **600** standards collected
- **300** standards fully assessed from:

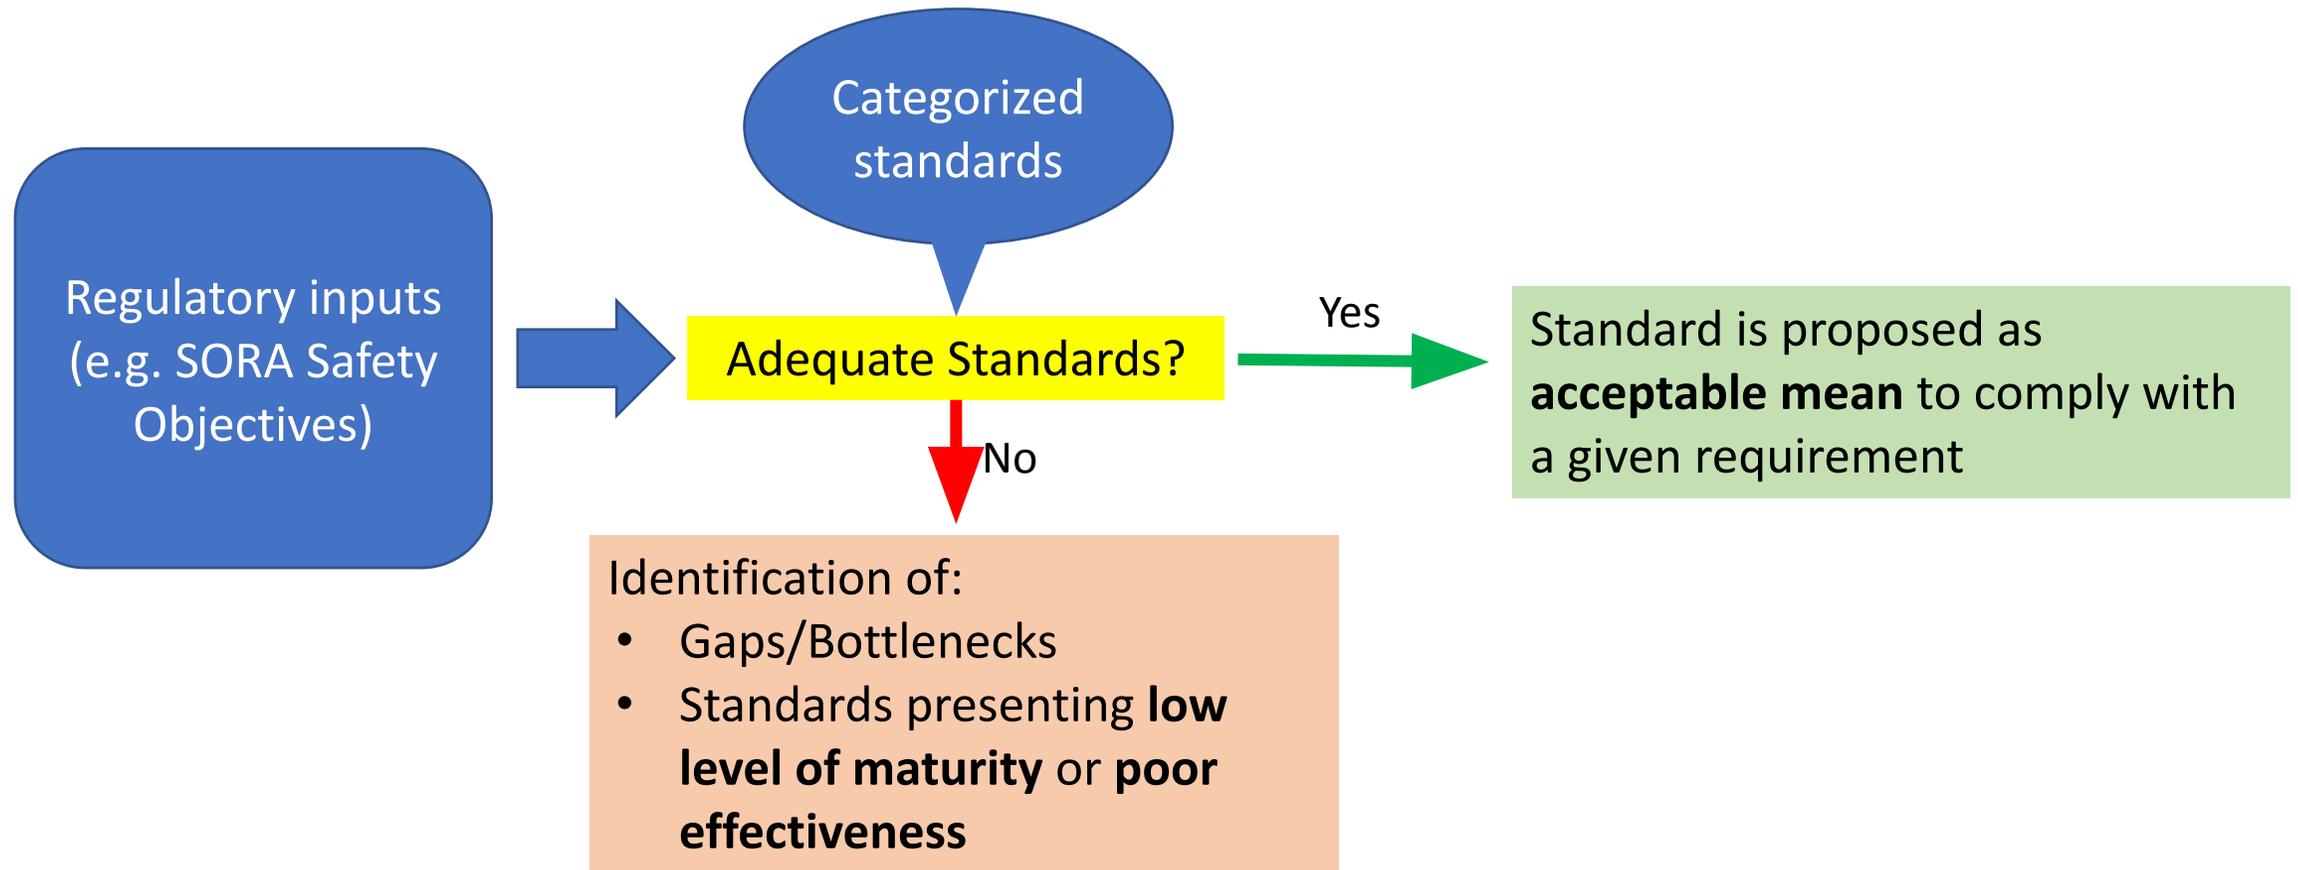

ASTM INTERNATIONAL

and more...

Approach - Developing a “meta” standard

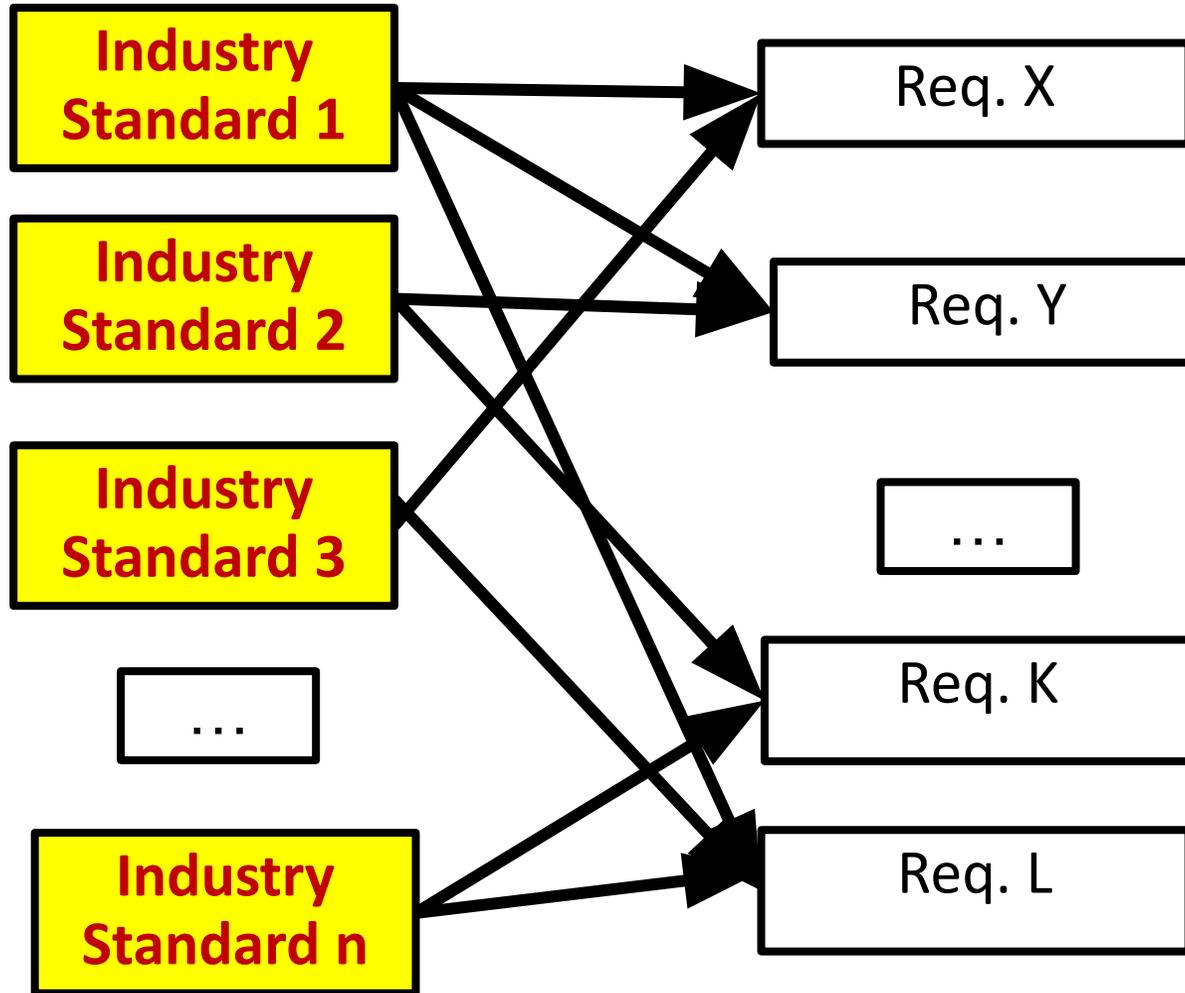

- Year 1: Standards required to support effectively the Specific Operations Risk Assessment (**SORA**) methodology
- Year 2: Standards supporting the development of **U-space** in Europe (+ 2nd iteration of SORA)
- Year 3: Standards to demonstrate compliance with SC Light-UAS requirements (+ 3rd iteration of SORA and 2nd iteration of U-space)

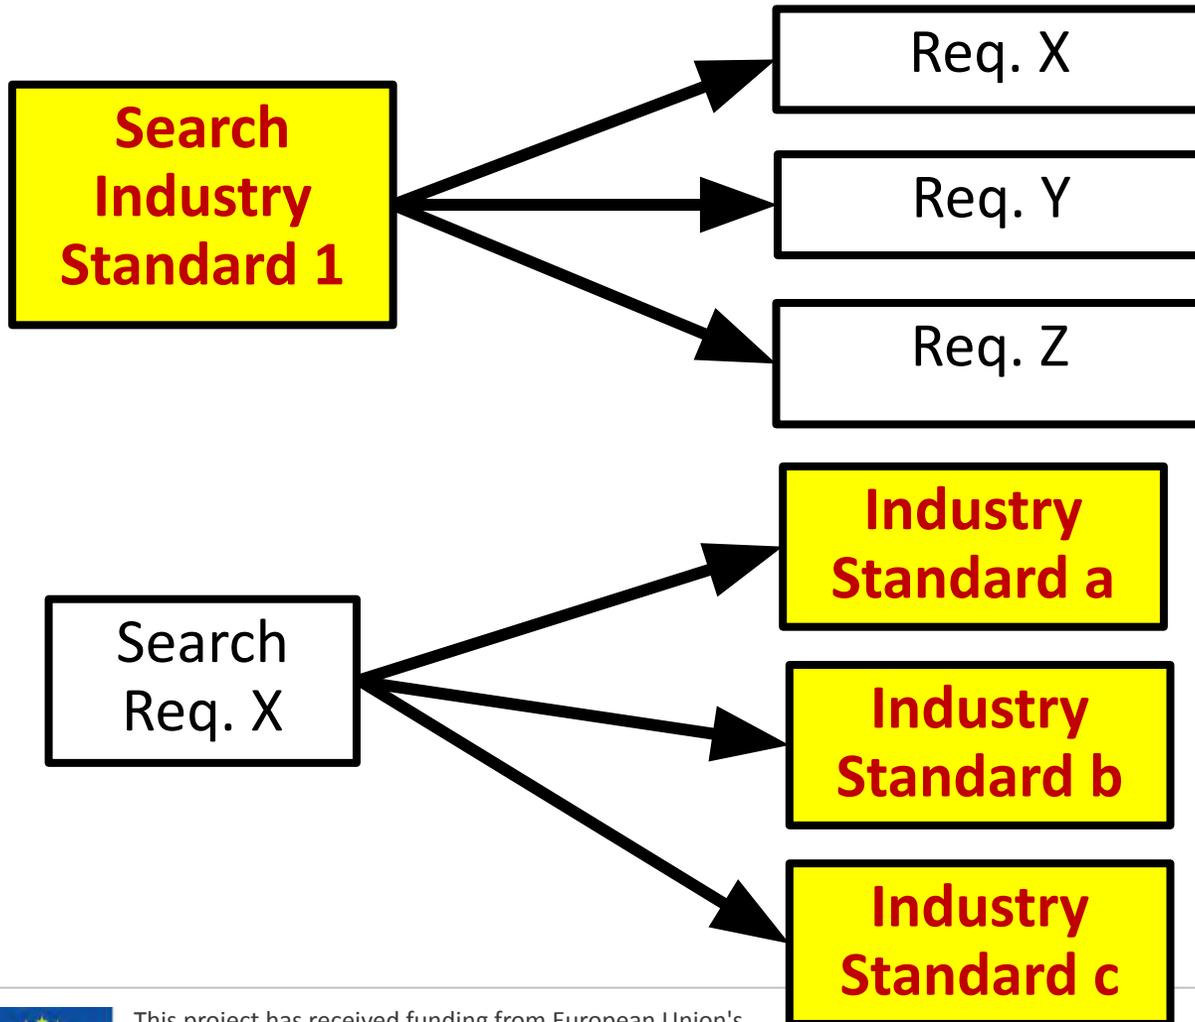

Iterative approach
throughout the project
duration

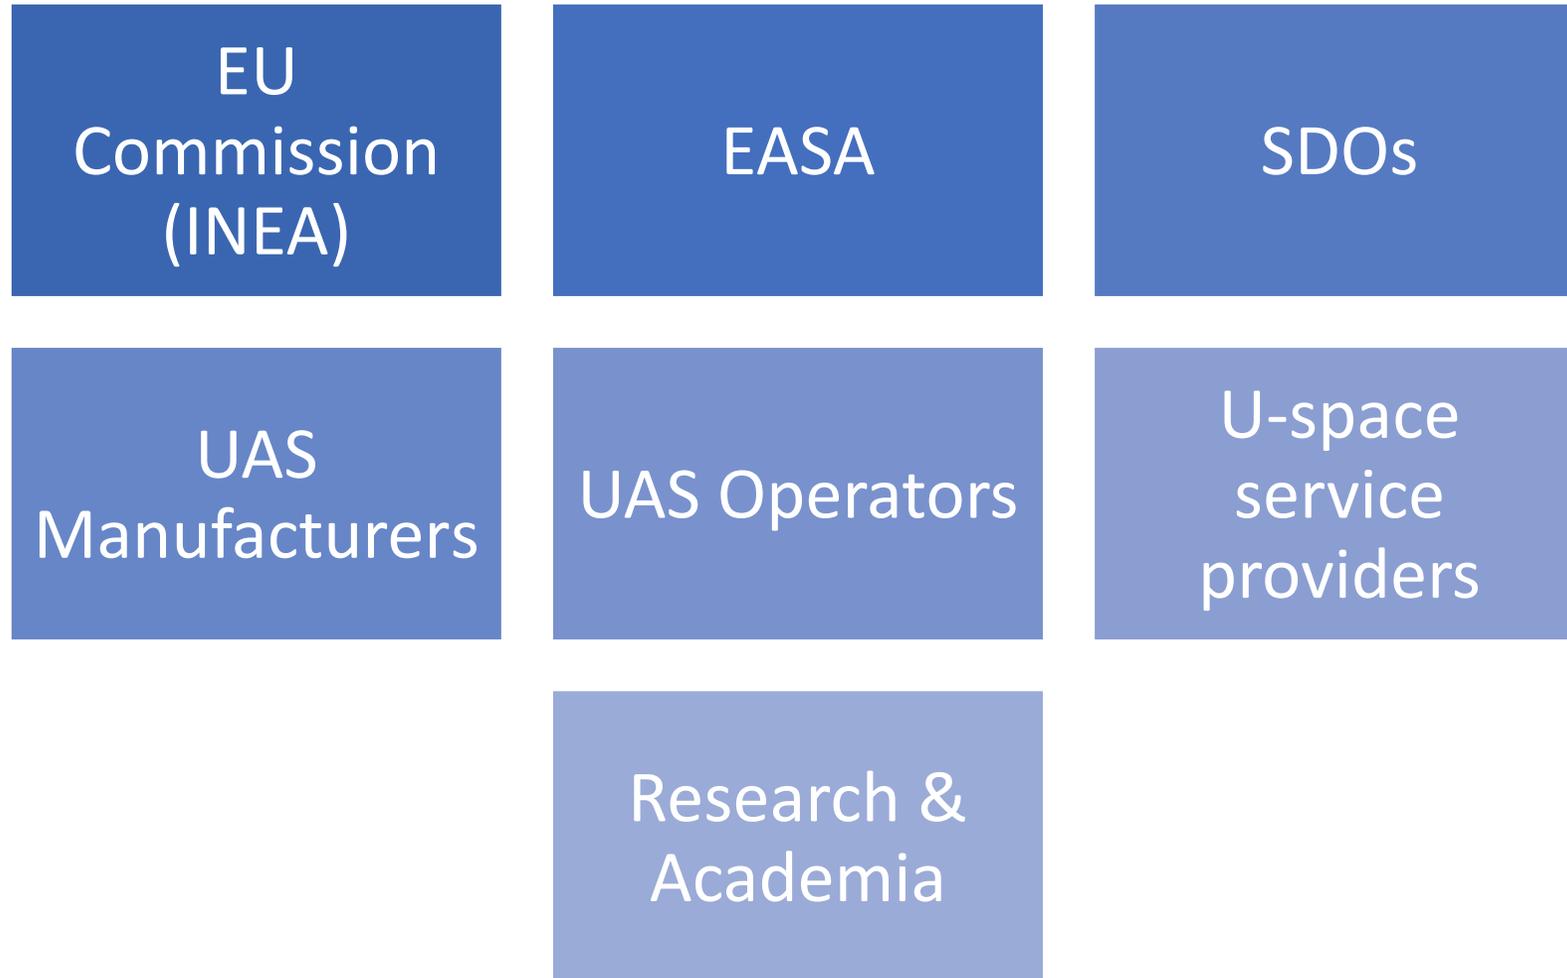

- There is no biunivocal relationship between one requirement and one standard
- One standard may contribute to several requirements
- One requirement may be supported by several standards
- **All possible relationships will be listed in AW-Drones outcomes**

- Online repository built from project results, would allow searching from “two directions”
- Searching a standard and finding to which requirement(s) it may contribute
- Searching a requirement and finding which standards may contribute to it

- **EASA** and **DG Move** gave feedback and steered the work in dedicated workshops
- **The Advisory Board** (made of regulators, manufacturers, operators, standard making bodies)
 - supported the methodological work of the project
 - provided review, recommendations and feedback on project activities and findings
 - brought an external view
- Everybody else provided inputs through online surveys and public workshops

- A **yearly report** about “State-of-the-Art” of standards for UAS
- A yearly report containing a “**well-reasoned**” **set of standards**:
 - Applicability
 - Maturity
 - KPA Effectiveness
- An **open repository** containing structured information about technical rules, procedures and standards for drones worldwide, including applicability to different UAS OPS categories and different SAIL = **metastandard**

ICAO UAS RELATED ACTIVITIES

A hand holding a drone with digital overlays. The background is a blue-toned image of a hand holding a drone, overlaid with various digital graphics including charts, graphs, and data points. The drone is a quadcopter with a camera mounted on the front. The digital overlays include a green circular graphic in the center of the drone, several circular gauges with numbers like 72%, 54%, 98%, and 82%, and various data points and lines.

AW Drones Webinar

7 December 2021

- ICAO UTM Framework Update
- ICAO U-AID (Humanitarian) Guidance Material
- ICAO UAS Model Regulations

ICAO's Mandate

- ICAO's UAS mandate:
 - Harmonization of regulations
 - Safe and coordinated integration of UAS activities
 - Assistance to ICAO Member States

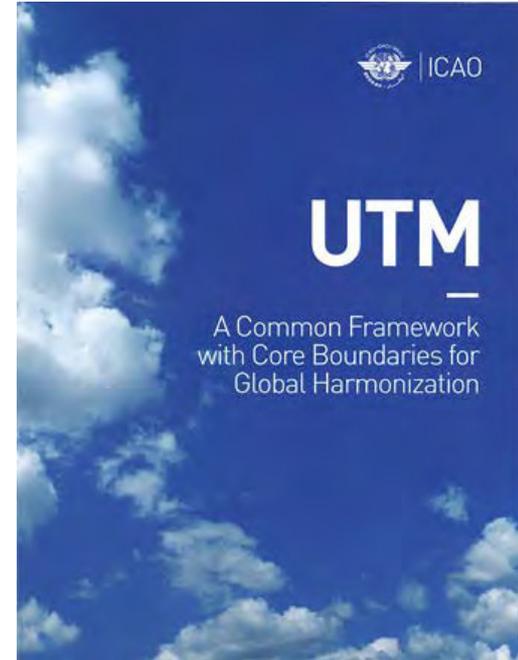

ICAO

SAFETY

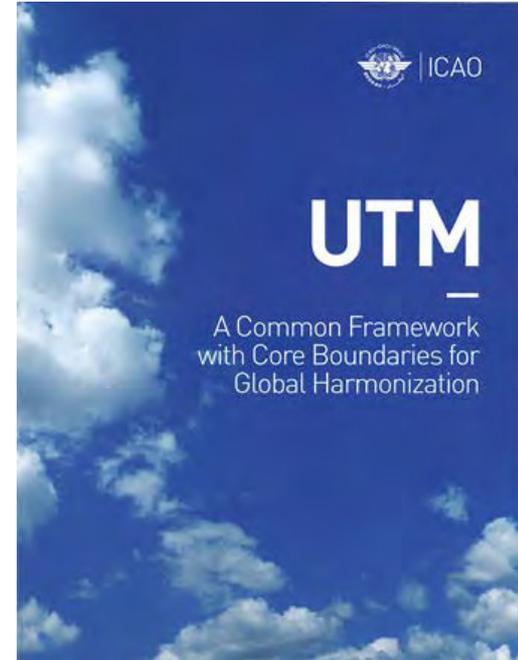

UTM Framework – Overview

- A framework and core capabilities of a “typical” UTM system
- Not a technical solutions document
- Developed in collaboration with industry/academia

- Provides high level UTM requirements/considerations
 - Not a technical solutions document
 - Safety-focused
- Maintain safety and facilitate integration with existing aviation system
- Support technological developments while enabling stakeholders to grow safely and efficiently

UTM Framework

EDITION 1 (RELEASED)

- Registration, identification and tracking
- Communications systems
- Geofencing-like systems
- Potential architectures

EDITION 2 (RELEASED)

- UTM-ATM boundaries and transitions
- Information exchange between ATM and UTM

EDITION 3 (RELEASED)

- UTM risk assessment/contingency procedures
- UTM service providers structure
- Separation and deconfliction in UTM

EDITION 4 (DRAFTING)

- UA performance requirements in a UTM environment
- UTM system certification requirements
- UTM in aerodrome environments/activities

- Guidance for humanitarian operations conducted by UAS (on-going and emergency response)
- Emphasizes safety risk assessment
- Facilitates rapid approvals
- Provides considerations for carriage of dangerous goods
- Addresses societal concerns
- Includes sample forms for the applicant and the local CAA for expedited approval
- Supports counterparts in the UN System and NGOs

UAS – ICAO Model UAS Regulations

ICAO UAS Model Regulations

➤ Development and background

Sept. 2016

Oct. 2018

Sept. 2019

39th Session of ICAO Assembly

- Leadership role to develop guidance for harmonized UAS regulations;
- Receive industry studies on cyber-resiliency;
- Develop UAS awareness and educational campaigns for users.

13th Air Navigation Conference

- Formulate & implement technical and regulatory solutions for UAS;
- Insure UTM systems interoperable with ATM systems;
- Enable authorization of non-certificated UAS in high-seas airspace.

40th Session of ICAO Assembly

- Accelerate full regulatory framework for UAS and UTM;
- Develop provisions and guidance material for safety risks of unauthorized presence of UA near aerodromes.

ICAO UAS Model Regulations

- Establish scope of unmanned aviation

ICAO UAS Model Regulations

Establish scope of unmanned aviation

- Categorization:
 - Open category: **Part 101**
 - Specific category: **Part 102**
 - Certified category: **ICAO Annexes**
- Approved Aviation Organizations (AAO): **Part 149**
- Advisory Circulars (acceptable means of compliance):
 - **AC 101-1**
 - **AC 102-1**
 - **AC 102-37: Dangerous Goods**
- Guidance Materials:
 - **U-AID**
 - **UTM**

- A compilation of existing UAS regulations
 - Vanuatu, New Zealand, Australia, Canada and the U.S.
- Model Regulations articulate:
 - remote pilot licensing, standard operating conditions, SMS requirements, operational risk assessments
- Guidance material providing best practices
- Prescriptive and performance-based regulations
- Operation-centric, risk-based approach
- Living document evolving with UAS technologies

Elements NOT addressed in the UAS Model Regulations

- States will need to address the following to insure alignment with existing national policy/law:
 - Privacy, insurance, economic authority;
 - Environmental requirements (noise and emissions);
 - Law Enforcement requirements and/or guidance;
 - Cyber Security Issues.

Questions/Discussion

The Future Air Mobility

Why is this important to us?

Airlines are exploring the use of new concepts for the **air transport of goods and people**.

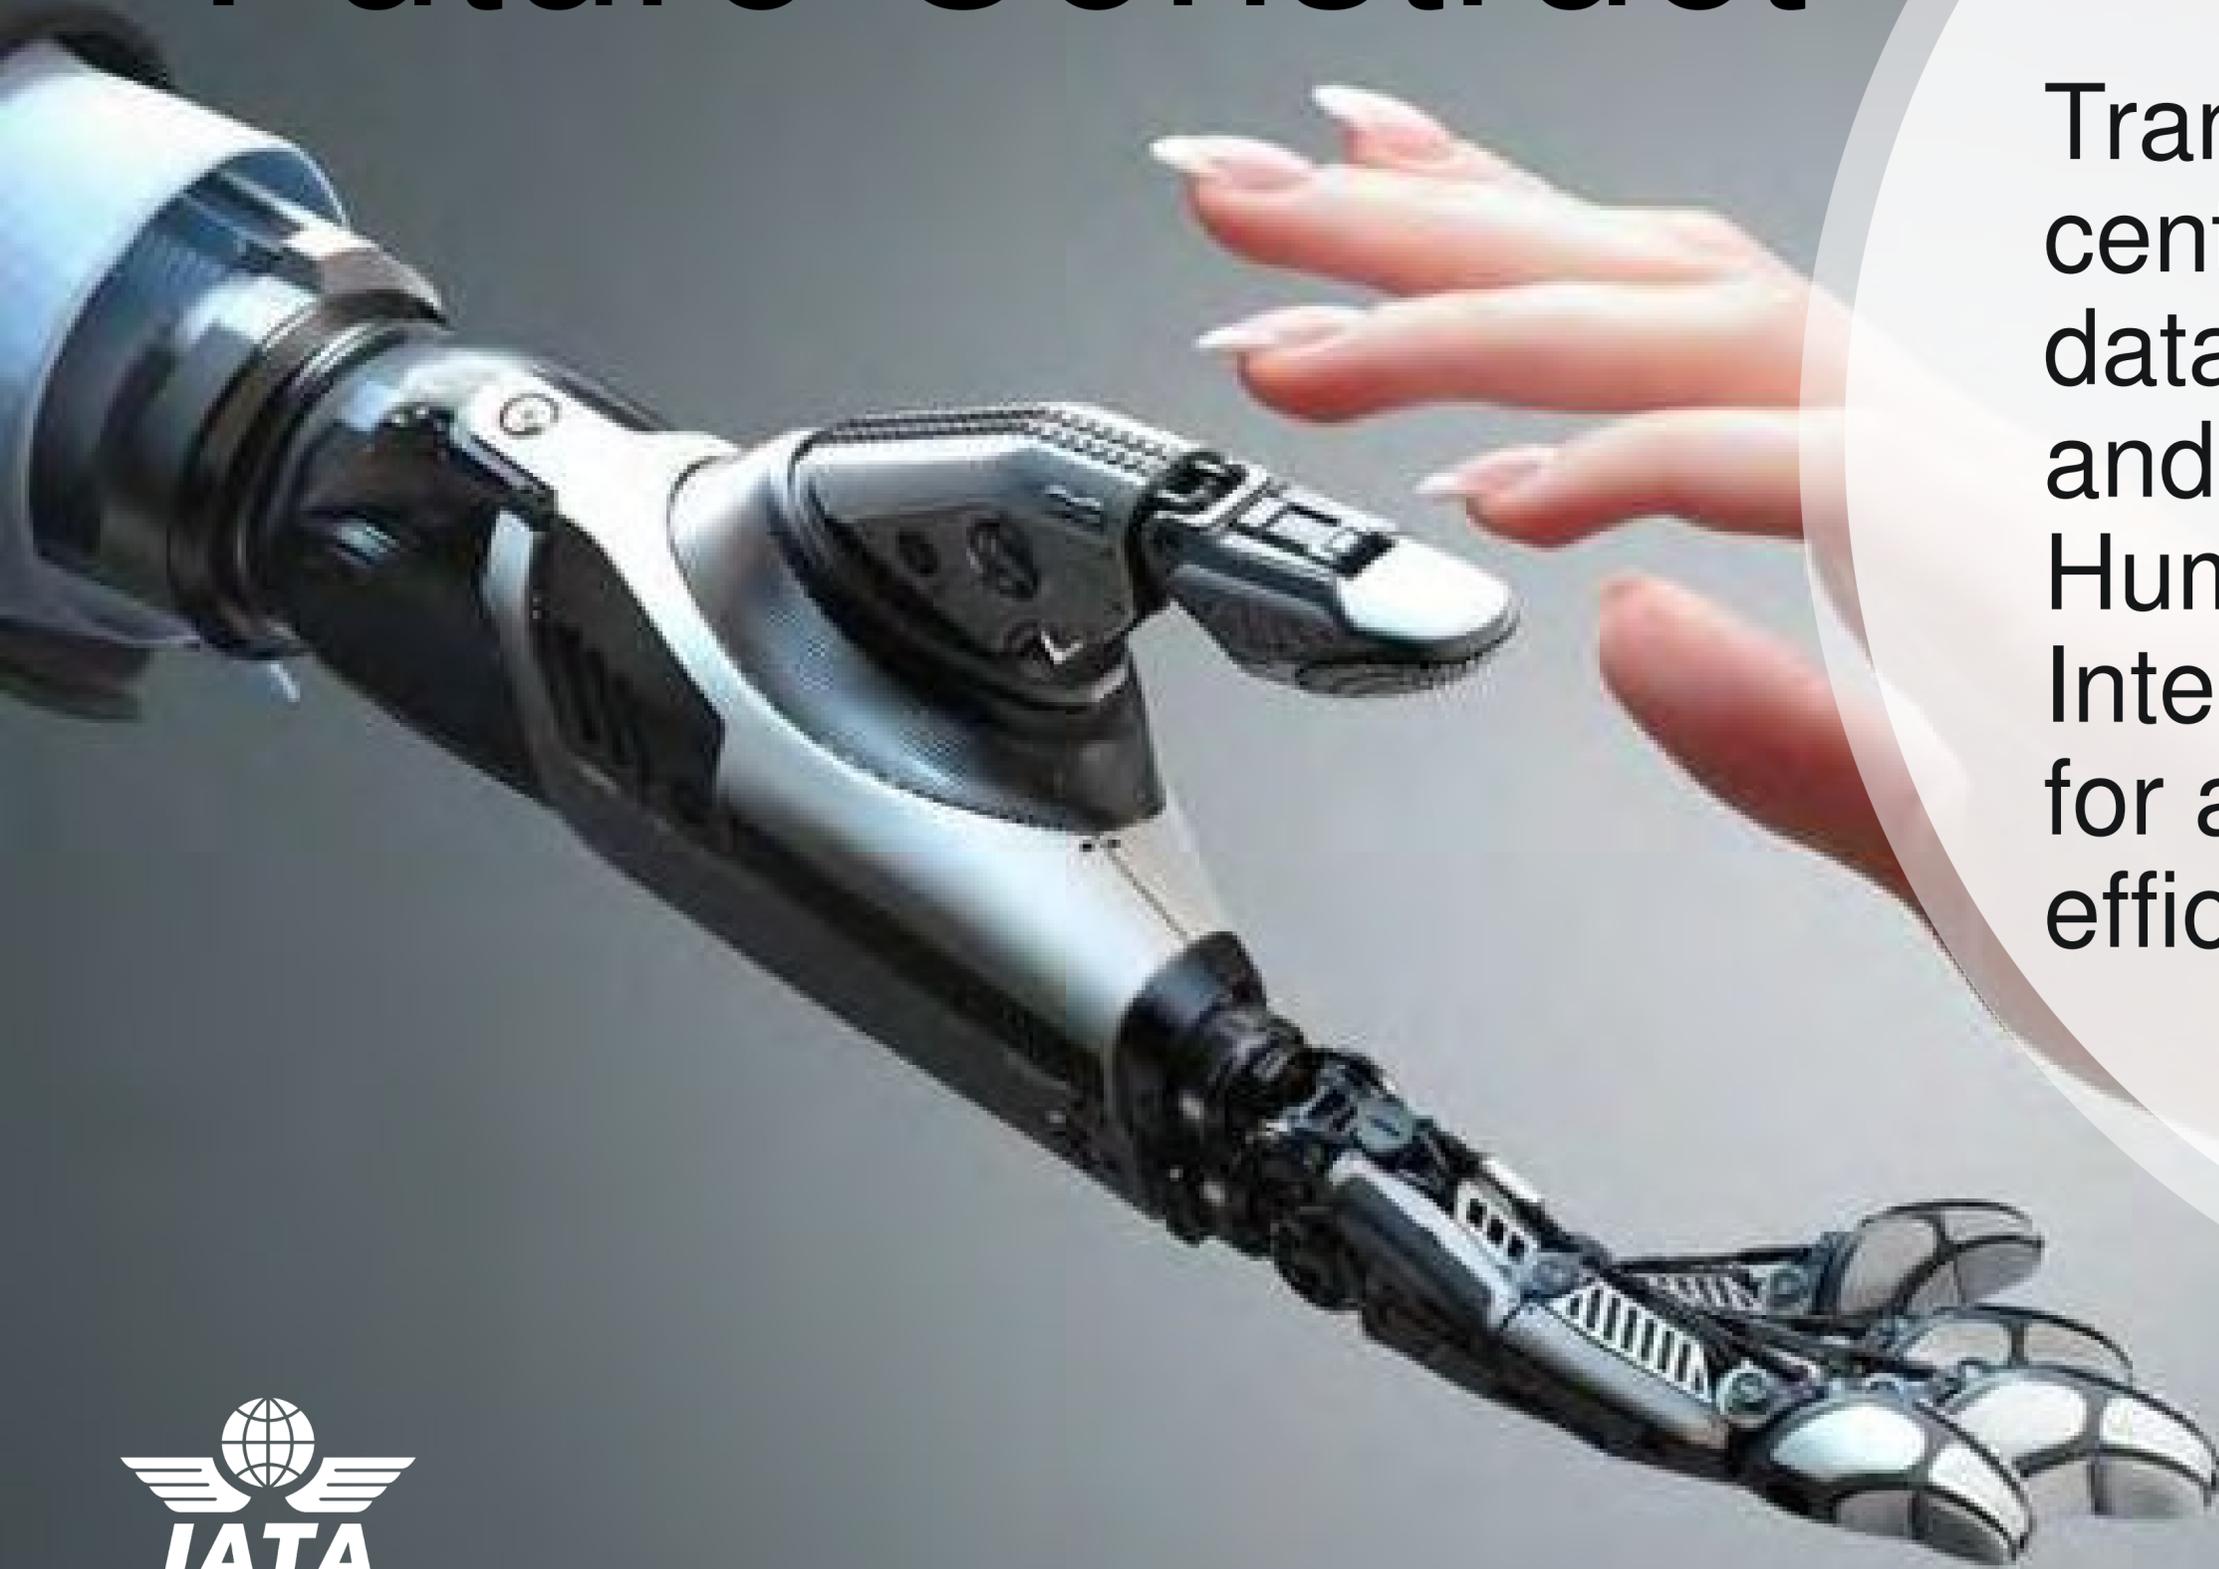

Airspace is a finite resource and to share it safely and efficiently, integration of new entrants is required.

UTM and STM provide an opportunity to **modernize legacy** ATM systems/concepts.

COVID-19 pandemic may have **fast-tracked** certain future operational concepts.

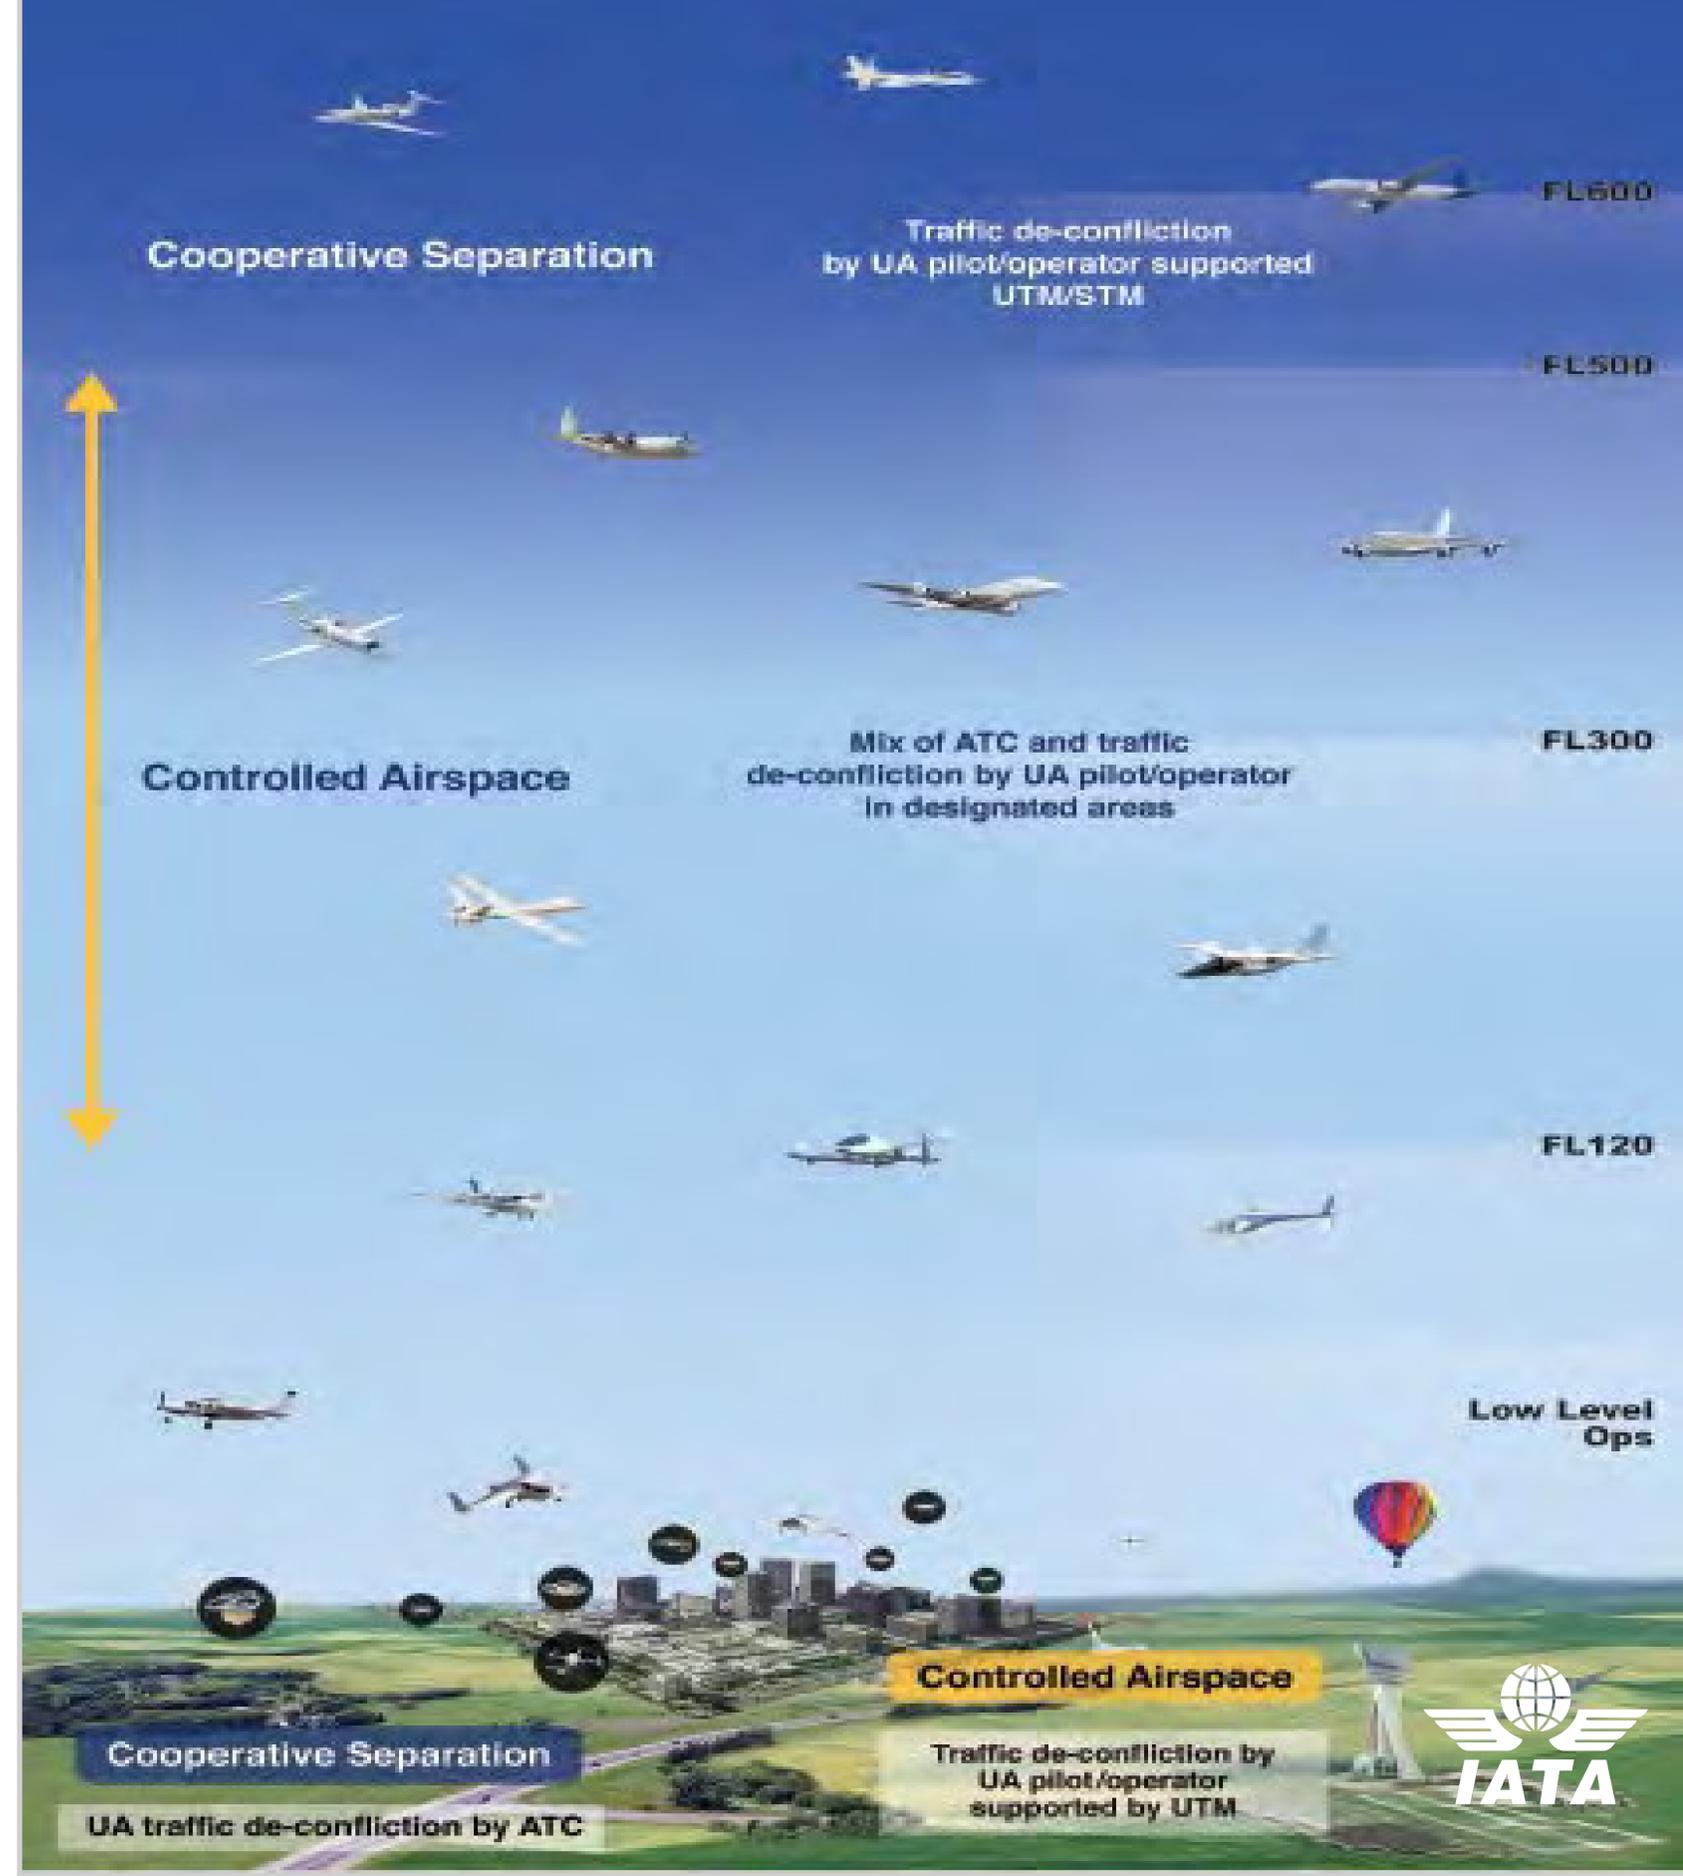

Future Construct

Transition from human-centric to technology and data centric architectures and solutions where AI and Human/ Emotional Intelligence work together for a stronger and more efficient overall system

The main challenge

The operating characteristics, the scale, and type of operations that will be / are performed by an ever-increasing fleet of new entrants in airspace are incompatible with some of the underlying assumptions for how traffic is managed.

What is needed to reach an end state of highly automated ATM system?

Performance based regulatory framework that allows for shorter innovation cycles

Cyber resilience and trust

Partnerships and Collaboration

Harmonization & Interoperability

Obstacles

- System integration & regulatory framework
- Investment
- Workforce & new players

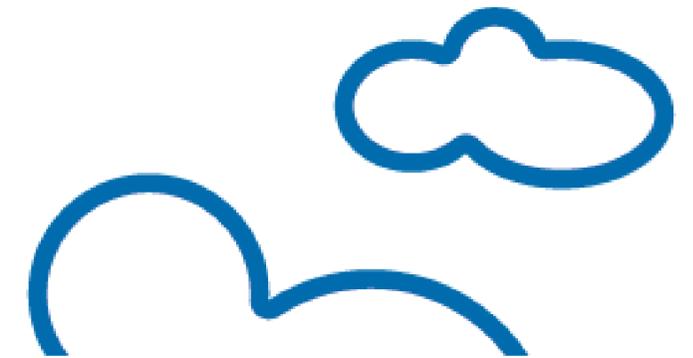

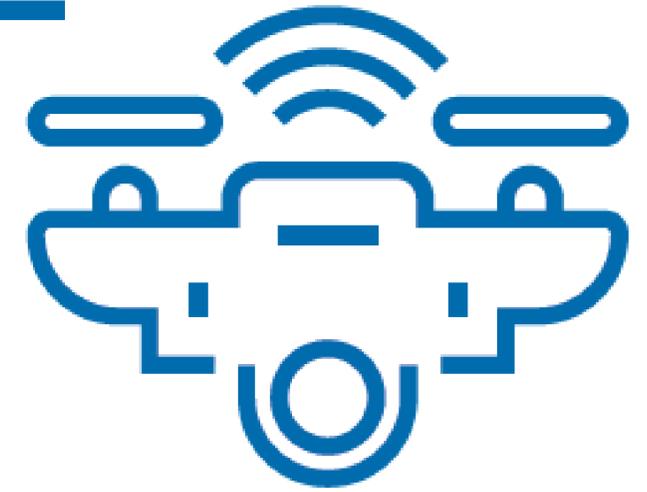

Actions

- Review ATM assumptions
- New mechanism for global standards
- Prioritize tech roadmap
- Regulators' competence
- Efficiency at system level
- Competence of workforce

WE ARE ALL ONE IN THE SKY

There is only one sky and all stakeholders, new and traditional, need to collaborate to keep it safe, secure, efficient and fair.

Thank You!

Stefano Prola

U-space services for UAS/UAM airspace integration - Role of EUROCONTROL

Giancarlo Ferrara and Munish Khurana

DECMA/INO/Drone Unit

7th Dec 2021

Presented to: AW Drones Final Dissemination Event

Research & Innovation

- Co-founder of **SESAR Joint Undertaking**
- In kind contribution to Research and Innovation
- Key research projects:

SESAR U-space projects

[CORUS-XUAM](#) (*Concept of Operations for euRopean U-space Services – eXtension for Urban Air Mobility*) – Project Leader

[BUBBLES](#) (*BUilding Basic BLocks for a U-Space SEparation Management Service*)

[DACUS](#) (*Demand and Capacity Optimisation in U-space*)

[ICARUS](#) (*Integrated Common Altitude Reference system for U-space*)

[INVIRCAT](#) (*IFR RPAS Control in Airports and TMA*)

[URCLerED](#) (*Unified Integrated Remain Well Clear Concept in Airspace D-G Class*)

[AURA](#) (*ATM U-Space Interface*)

Horizon 2020 U-space related Research projects

[5D-AeroSafe](#) (*5 services of Drones for increased Airports and waterways Safety and security*)

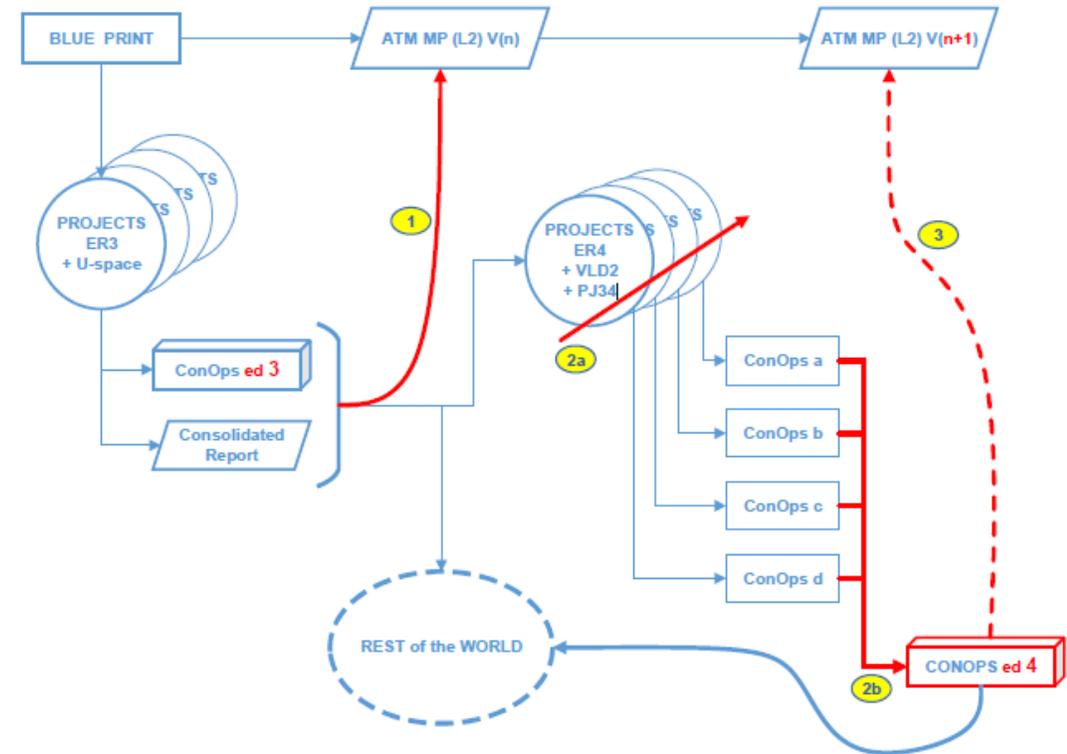

[LABYRINTH](#) (*Unmanned Traffic Management 4d Path Planning Technologies for Drones*)

[Drone4Safety](#) (*Inspection Drones for Ensuring Safety in Transport Infrastructures*)

Consolidation of U-space CONOPS with SJU

EUROCONTROL, in coordination with SJU, is leading the transversal coordination of 17 SESAR and H2020 projects related to U-space/UAM (European U-space ConOps Coordination Cell) with the aim to:

- ✓ Focus the discussion on specific ConOps issues and **accelerate R&D** on U-space
- ✓ Fertilize information sharing among U-space related projects ensuring **consistency of project outcomes**
- ✓ Discuss proposed changes to the ConOps & **foundation package** information
- ✓ Support the projects in their contribution to **accelerate a consistent deployment** of U-space/UAM services at a European level
- ✓ Carry out necessary liaison with **regulation and standardization** bodies (e.g. EASA, EUROCAE, ASTM, ISO) to achieve harmonious outcomes.

Support to Regulations Development

- a. U-space Regulation (2021/664)
- b. Drone regulation (2019/947) and (2019/945)
- c. Ongoing development of Acceptable Means of Compliance and Guidance Material for U-space Regulation :

WP1: Airspace Risk Assessment

WP5: U-space Flight Authorization

WP7: Electronic Conspicuity

WP9: Coordination with local authorities

- d. Mitigate potential risks from unauthorised drones
- e. Promote guidance material

- a. Member of the ICAO RPAS Panel and co-rapporteur of the RPASP WG 2 C2 Link, a datalink which is critical for ATS and ATC data/voice
- b. Member of the ICAO UAS Advisory Group

Support to Standards Development

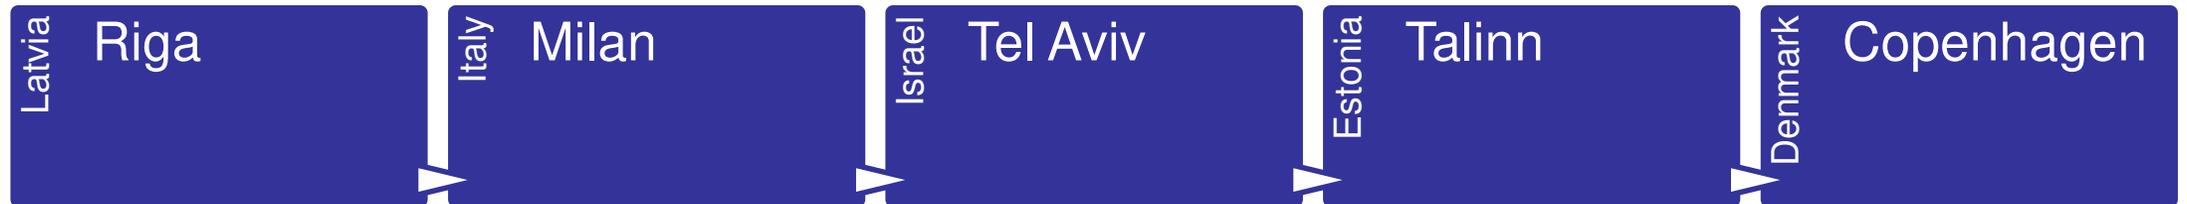

- a. Counter UAS (C-UAS)
- b. ED-286 OSED for C-UAS in controlled airspace
- c. ED-xxx Interoperability Requirements for C-UAS systems
- d. ED-xxx System Performance Requirements for non-cooperative UAS detection systems

Provide domain expertise in developing a document on “Unauthorized UA incursions at the airport”

Support to States

- Establish a test corridor between EEC and St Quentin en Yvelines in order to validate scenarios and equipment for the purpose of Paris Olympics
- Conduct airspace assessments

Note: Additional request from 19 States to conduct airspace assessment

- Provide technical guidance to implement U-space regulation

Validation of U-space services in simulated environment at the European Innovation Hub at Bretigny (France)

- Development of a Validation and Simulation Center to enable validation and certification for airspace implementation and deployment.

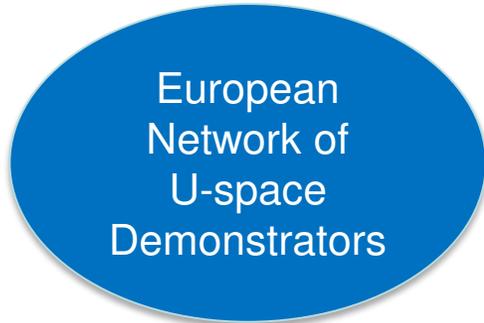

Real/Fast time simulation platform open to all players (UTM Service Provider, CAAs, Researchers, ...)

- Neutral validation against current standards and regulations (airspace assessment)
- Provide simulation capabilities for SESAR and other research / innovation projects
- Interactive showcase that highlights UTM concepts to key stakeholders

Transition from U-space Demonstration to Deployment

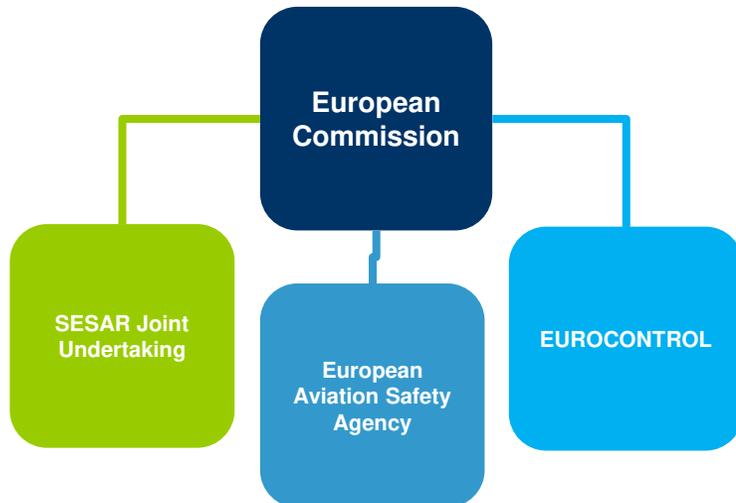

INITIATIVE

OBJECTIVES

- Building on state-of-the-art deployment of BVLOS operations
- Stimulate creation of regulations and standards
- Accelerate lead time to market
- Promote economies of scale
- De-risk implementations
- Reduce red tape

UNIQUE PARTNERSHIP

DELIVERABLES

- U-space status monitoring
- Share lessons learned
- U-space project inventory
- Open discussion forum

Methodology for assessment of standards

Tom van Birgelen - NLR

This project has received funding from European Union's Horizon 2020 Research and Innovation Programme under Grant Agreement No°824292.

1. Coverage of requirements by standards
2. Ranking the standards per requirement
3. Conclusions from the ranking of the standards
4. Identification of gaps
5. Assessment of the gaps
6. Conclusions from the assessment of the gaps
7. Remarks

- Identified standards for each requirement (from SORA objectives and mitigations and identified U-Space services) have been assessed on how effective they are in covering the requirement.
- Three outcomes
 - Full coverage
 - Partial coverage
 - No coverage

Ranking the standards per requirement

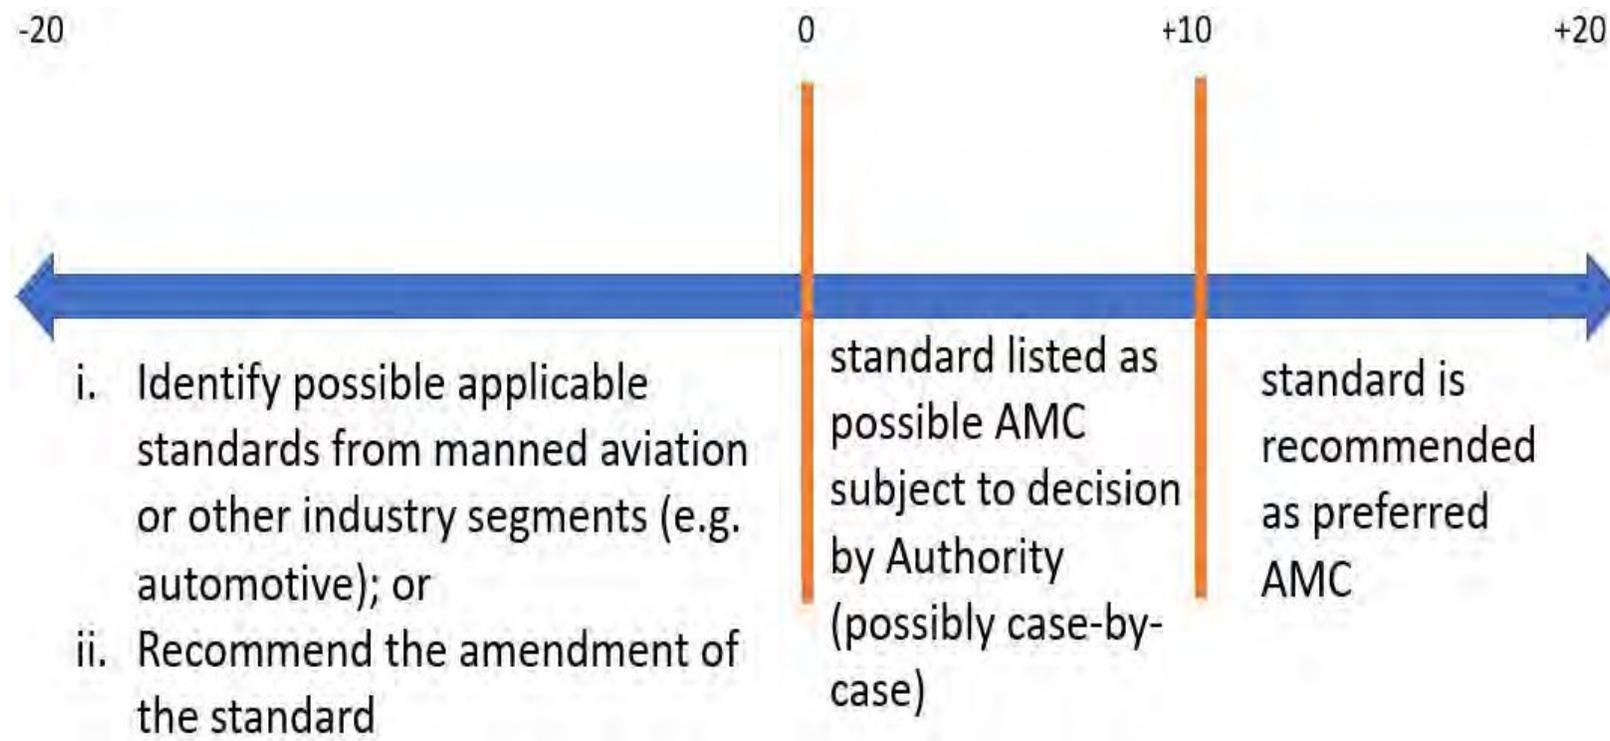

Each standard with partial or full coverage has also been assessed using the criteria below. Each criterion has a scoring system and a weight factor. The weighted scores for all criteria are summed which gives a total score.

Criterion (Weight)	-2 (lowest ranking)	-1	0	1	2 (highest ranking)
Maturity of standard (2)	Drafting	Internal Consult.	External Consult.	Published	Recognized / Accepted / Used
Type of standard (1)	N.A.	N.A.	Information Guidance	Best Practice	Standard Specification
Cost of compliance (2)	Very High	High	Medium	Low	Very Low
Environmental Impact (1)	Bad	N.A.	Neutral	N.A	Good
Impact on EU Industry competitiveness (1)	Very negative	Negative	No impact	Positive	Very Positive

Conclusions from the ranking of the standards

- The total scores are used to rank the standards per requirement.
- Depending on the total score, the following conclusions are drawn:

- For each requirement that is not fully covered by existing standards, the gaps have been identified.

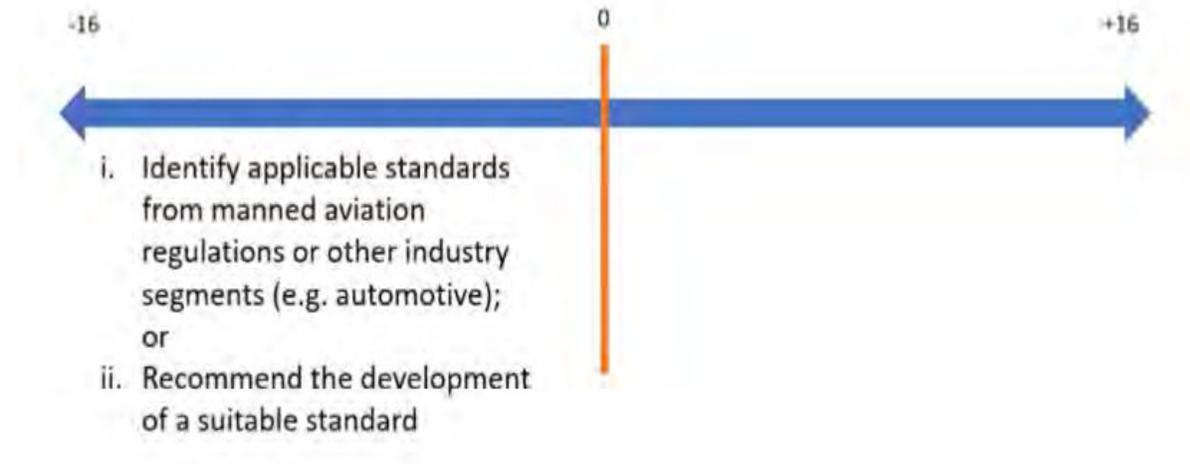

Each gap has been assessed using the criteria below. Each criterion has a scoring system and a weight factor. The weighted scores for all criteria are summed which gives a total gap score.

Criterion (Weight)	-2	-1	0	1	2
Safety impact (3) of not having a standard	Very High	High	Medium	Low	Very Low
Cost of compliance (2) to the requirement with the lack of a standard	Very High	High	Medium	Low	Very Low
Environmental Impact (1) of not having a standard	Bad	N.A.	Neutral	N.A.	Good
Impact on EU Industry competitiveness (1) of not having a standard	Very negative	Negative	No impact	Positive	Very positive

Depending on the total gap score, the following conclusions will be drawn:

When the weighted gap score is below zero, applicable standards from manned aviation and other industries will be proposed (e.g. standards applicable to navigation receivers for the automotive industry or standards for mobile telephony) or a recommendation to develop a suitable standard will be provided.

- It shall be emphasized that the assessment did not address the technical quality of the individual standards. It was assumed that each standard was adequate to fulfil the scope for which it was developed, and hence the assessment only evaluated the standard's capability to address the criteria.
- AW-Drones partners did not have full access to all standards at the time of the assessment. A complete assessment is provided only for the standards with full access. For the others we provide a preliminary assessment based on the publicly available information.

Thank you for your attention !

AW-Drones: Project Outcomes

Matteo Natale

- Year 1: Standards required to support effectively the Specific Operations Risk Assessment (**SORA**) methodology
- Year 2: Standards supporting the development of **U-Space** in Europe (+ 2nd iteration of SORA)
- Year 3: Standards needed to support **SC Light UAS** (+ 3rd iteration of SORA and 2nd iteration on U-Space)

Iterative approach
throughout the project
duration

The methodology for the assessment of the standards comprises **different cases**:

- **CASE 1: Assessment of standards potentially suitable to comply with a given requirement (e.g. SORA OSO, U-space service, SC requirement)**
- **CASE 2: Assessment of the gaps (i.e. requirements not covered)**

- Multi Criteria Analysis to address each **CASE**

- **CASE 1:** Assessment of standards **potentially** suitable to comply with a given requirement

Criterion	Weight
Effectiveness to fulfill requirement*	3
Maturity	1
Type of standard	1
Cost of compliance	2
Environmental impact	1
Impact on EU industry competitiveness	1

Scoring system **example**

Item	-2	-1	0	1	2
Maturity	Draft	INT Consult.	EXT Consult.	Pub.	Recommended

* Effectiveness to fulfill SORA req. removed in final iteration

OSO #09, 15, 22: Remote Crew Training

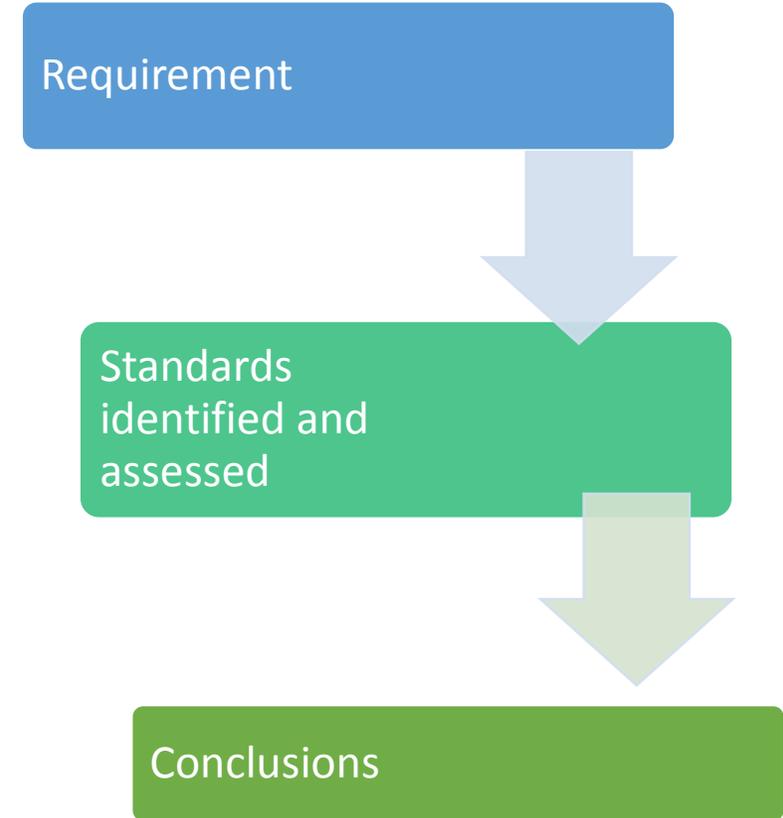

REMOTE CREW COMPETENCIES		Level of integrity		
		Low	Medium	High
OSO #09, OSO #15 and OSO #22	Criteria	The competency-based, theoretical and practical training is adequate for the operation ¹ and ensures knowledge of: <ul style="list-style-type: none"> (a) the UAS Regulation; (b) airspace operating principles; (c) airmanship and aviation safety; (d) human performance limitations; (e) meteorology; (f) navigation/charts; (g) the UAS; and (h) operating procedures. 		
	Comments	¹ The distinction between a low, a medium and a high level of robustness for this criterion is achieved through the level of assurance (see table below).		

REMOTE CREW COMPETENCIES		Level of assurance		
		Low	Medium	High
OSO #09, OSO #15 and OSO #22	Criteria	Training is self-declared (with evidence available).	<ul style="list-style-type: none"> (a) Training syllabus is available. (b) The UAS operator provides competency-based, theoretical and practical training. 	A competent third party: <ul style="list-style-type: none"> (a) validates the training syllabus; and (b) verifies the remote crew competencies.
	Comments	N/A	N/A	N/A

OSO #09, 15, 22: Remote Crew Training

Standard	Coverage	Gaps	Score
ISO 23665 - Unmanned aircraft systems -Training for personnel involved in UAS operations	Partial	<ul style="list-style-type: none"> Lack of standards covering training requirements for personnel, other than remote pilot, in charge of duties essential to the management of the flight (semi-regulated professions; e.g. Visual Observer) 	8
JARUS Recommendations for RPC	Partial	<ul style="list-style-type: none"> Lack of standards covering training requirements for non-regulated professions (e.g. supporting personnel, payload operator, flight dispatcher etc.) ISO 23665 (current version) only covers VLOS. 	8

OSO completely covered for the Remote Pilot.
The first identified gap has graver implications on safety, hence it is recommended to take action to cover it.

- Most SORA requirements are at least partially covered by published standards, except:
 - OSO#13 - External services supporting UAS operations
 - OSO#18 - Automatic protection of the flight envelope from human errors
 - OSO #16 – Multi-crew Coordination
- Some requirements are fully covered, but with **limitations** (e.g. limited MTOM/configuration)
- Roughly 40 gaps identified
- Some gaps solved by AMCs in new EASA NPA of 09/2021, e.g.:
 - Emergency Response Plan
 - OSO #08, 11, 14, 21 – Operational Procedures
 - Assurance criteria on operational procedures of:
 - M1 – Strategic Mitigations for Ground Risk
 - M2 – Effects of Ground Impact are Reduced
 - OSO #16 – Multi-crew Coordination
 - OSO #19 – Safe Recovery from Human Error
 - OSO #23 – Adverse Operating Conditions

- Assessment of standards related to the following U-space services:
 - Network ID
 - Geo-Awareness
 - Flight Authorisation
 - Traffic Information
 - Weather Info*
 - Conformance Monitoring*

**U-space services in
Commission Implementing
Regulation 2021/664**

Standards assessed vs. U-space services analogously to SORA objectives

*** services seen as optional services but may be obligatory if deemed necessary by a Member State**

Network identification service

A network identification service shall allow the continuous processing of the remote identification of the UAS throughout the whole duration of the flight and shall provide the remote identification of the UAS to authorised users in an aggregated manner.

Standard	Coverage	Gaps	Score
ASTM F3411-19 UAS Remote ID and Tracking	Partial	<ul style="list-style-type: none"> Compliant with draft U-space regulations: partially, but gaps are being addressed in ASTM's current revision. 	10
ASD-STAN prEN 4709-002 Aerospace series - Unmanned Aircraft Systems - Direct Remote identification	Partial	<ul style="list-style-type: none"> Direct Remote Identification covered, not Network Identification Service 	8

While the requirement is not fully covered, ASTM is working with EUROCAE to address a global standard for NIS. This effort is coordinated by ISO TC 20 SC 16, which is developing a global standard on remote identification of unmanned aircraft (i.e. 23629-8).

Requirement

Standards identified and assessed

Conclusions

- All services only partially covered.
 - Selected standards only fit very particular parts of a service e.g ED-269 as data format for geozones as part of the geo-awareness service
- Most standards have not been published yet
- EUROCAE, ISO, ASTM and ASD-STAN are actively working on the development of new standards covering U-space services.

Light-UAS.2625 Instructions for Continued Airworthiness (ICA)

Standard	SAIL	Coverage	Gaps	Score
F2909-19 Standard Practice for Maintenance and Continued Airworthiness of Small Unmanned Aircraft Systems (sUAS)	III and IV	Full	In principle it is only applicable to UAS with MTOM up to 25kg, but applicability can be extended if approved by NAA	6
F3366-19 Standard Specification for General Maintenance Manual (GMM) for a small Unmanned Aircraft System (sUAS)	III and IV	Supporting standard for the above covering Maintenance Manuals	In principle it is only applicable to UAS with MTOM up to 25kg, but applicability can be extended if approved by NAA	6

Requirement adequately covered. Applicability of identified standards to be further assessed from a technical point of view

Requirement

Standards identified and assessed

Conclusions

- Availability of standards to cover the requirements is mostly aligned with the corresponding SORA OSOs and mitigations
- ASTM F3298 – 19 Standard Specification for Design, Construction, and Verification of Lightweight Unmanned Aircraft Systems can be the baseline complemented by specific standards to cover the individual requirements, e.g.
 - ED-280 Guidelines for UAS safety analysis for the Specific category for Light.UAS.2510
 - ASTM F3002 – 14 Standard Specification for Design of the Command and Control System for Small Unmanned Aircraft Systems (sUAS) for Light.UAS.2575
- Main gaps related to:
 - Subpart C – Structures: Test load and targets to be defined
 - Subpart E – Lift/Thrust/Power System: lack of standard for engines design
 - Subpart F – Equipment: lack of standards for environmental protection of the GCS

- The final deliverable with conclusions will be submitted by mid-December
- Portal online at <https://standards.aw-drones.eu/>
- User interface to be further developed
- Some AW-Drones partners are committed to keep the portal running after the end of the project

Thank you for your
attention

Back-up

OSO #09, 15, 22: Standards' Assessment

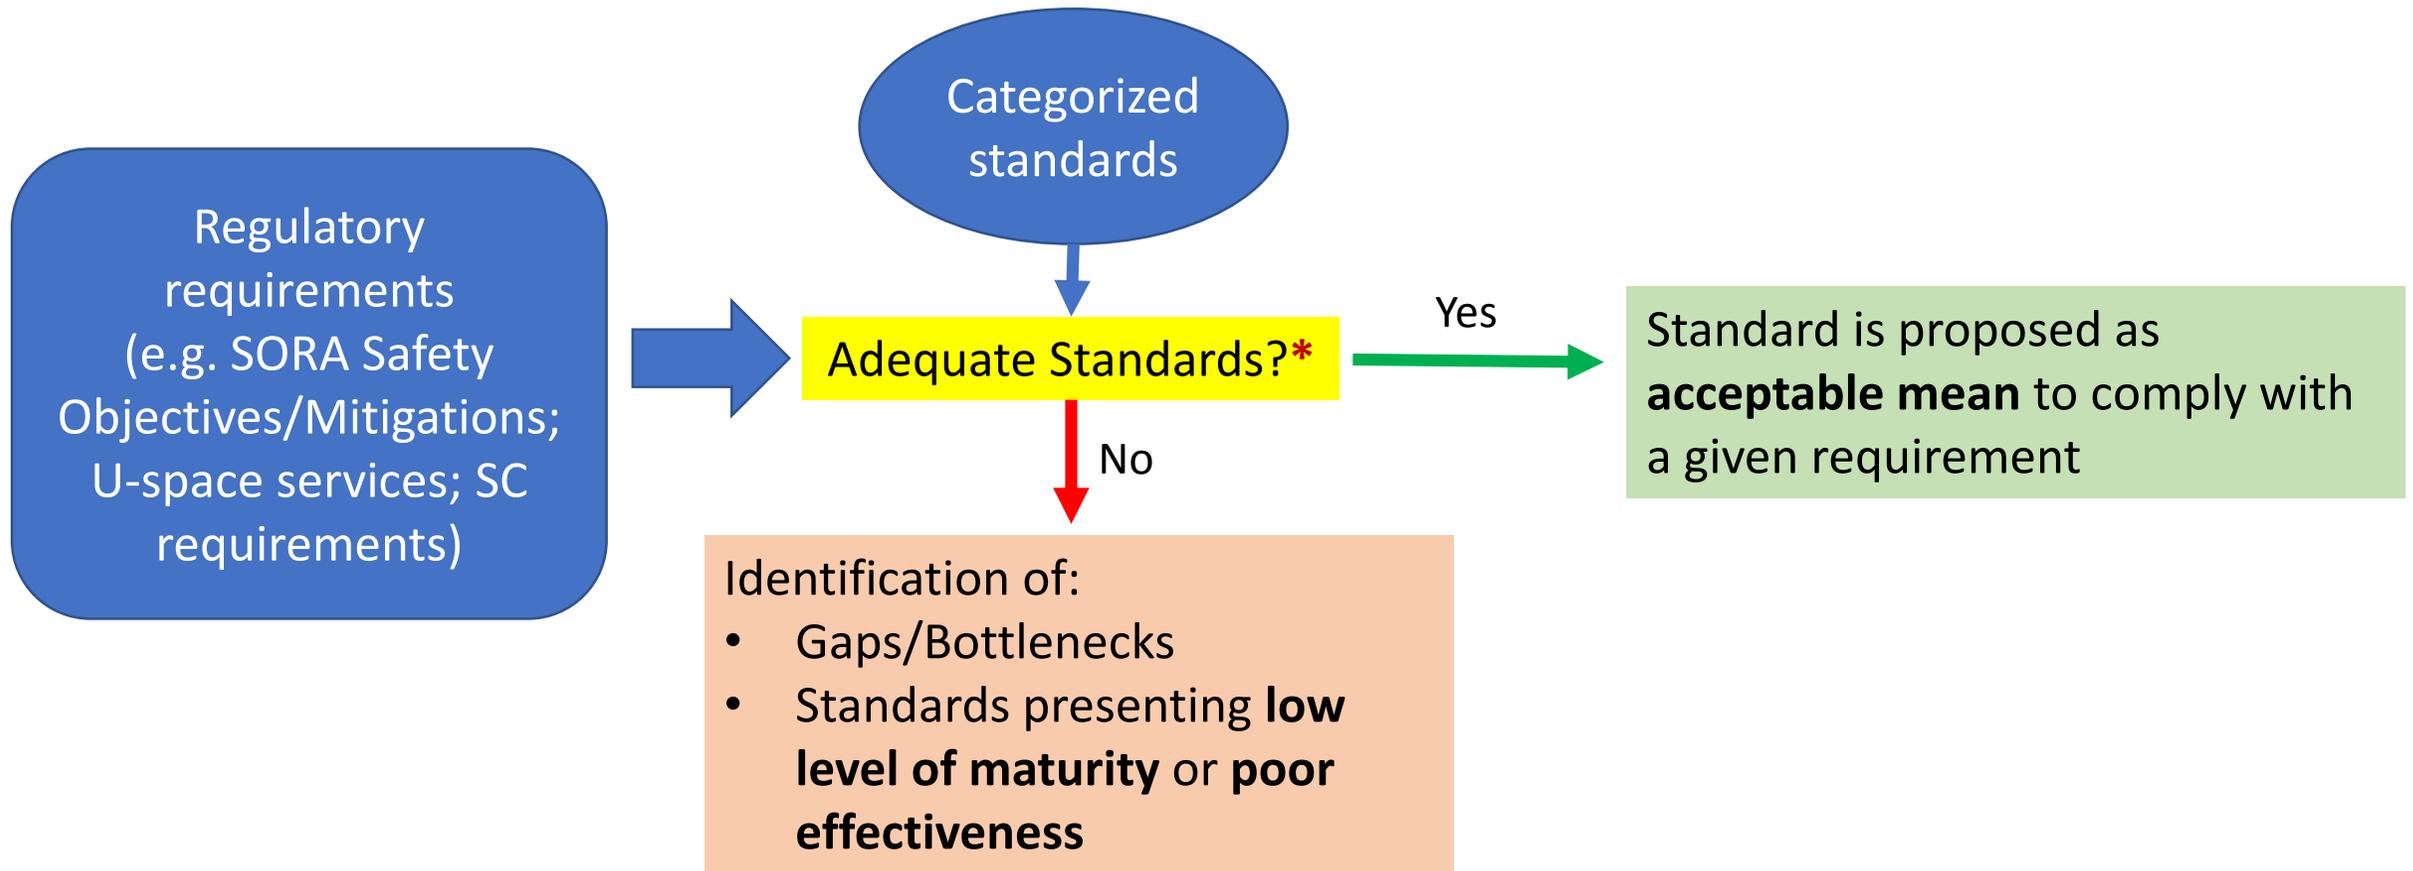

SDO	#	Title	Maturity	Type of standard	Cost of Compliance	Environmental Impact	Impact on EU Industry competitiveness	Score

Peter van Blyenburgh - Blyenburgh & Co, France
pvb@rps-info.com

Objective

UAS OPS	Current Situation	Identify the market sectors in which drone flight operations currently take place in compliance with the currently applicable rules or regulations .	VLOS, EVLOS, BVLOS Below 500 ft. (150 m) above ground level Over densely or sparsely populated areas
		Identify the mission purposes of the flight operations currently taking place in compliance with the currently applicable rules or regulations .	
	Near Future (1-2 years starting 210101)	Identify the market sectors in which drone flight operations will take place starting 1 Jan 2021 in compliance with new EU drone regulation .	
		Identify the mission purposes of the flight operations that will take place starting 1 Jan 2021 in compliance with new EU Drone regulation .	
Obtain initial feedback on the use of SORA / Standard Scenarios / Predefined Risk Assessment & qualification of respondents to participate in the OPS RISK Survey .			
OPS RISK	Obtain detailed feedback on the use of SORA / Standard Scenarios / Predefined Risk Assessment .		

Terms & Explanations

Operator

Each respondent is a drone “Operator”:
A company or organisation (non-governmental or governmental) conducting, or planning to conduct, commercial or non-commercial flight operations with drones.

Note: Only Operators could participate

Types of Operation

Commercial

Flights carried out by companies for paying customers (incl. Flight Schools and Test & Demonstration Site Management organisations).

Non Commercial

Flights carried out by companies or organisations without external financial compensation from a customer.

Non-commercial operations include «**Corporate Operations**», which should be understood as: «Flights carried out by companies or organisations to meet their own internal requirements».

Explanations of these terms were supplied (in EN, FR, DE, ES) as survey reference documents.

Terms & Explanations

Types of Operator

- **Corporate Entity - Drone Manufacturer & Operator**
- **Corporate Entity - Drone Operator**
- **Corporate Entity - Flight School**
- **Corporate Entity - Research**
- **Corporate Entity - Test & Demonstration Site Management**
- **Corporate Entity - U-Space Service Provider**
- **Governmental Entity - Drone Operator**
(non-military; including fire civil defence, coast guard, customs authorities, emergency services, police, environmental & infrastructure maintenance agencies, fire brigades)
- **Governmental Entity – Research**
- **Academia / University**
- **Non-governmental organisation (NGO)**
(e.g. Red Cross, Doctors Without Borders, environmental protection groups)

- = Have contributed to survey
- = Have NOT contributed to survey

Explanations of these terms were supplied (in EN, FR, DE, ES) as survey reference documents.

Terms & Explanations

Drone Market Sectors

Each Market Sector contributed to the survey

<ul style="list-style-type: none">1 Aerial Photography, Audio-Visual Production, Advertising2 Agriculture, Fishery, Fish Farming, Forestry3 Aircraft System or Sub-system Production4 Cinema & TV Industry5 Construction & Real Estate6 Entertainment, Artistic Expression & Sport7 Environmental Protection & Wildlife Conservation8 Flight Training / Instruction9 Heritage Site & Historical Monument Management10 Humanitarian Aid11 Insurance (Accident & Claim Investigation)12 Maintenance	<ul style="list-style-type: none">13 Mining & Exploration14 Miscellaneous - Air Show15 Miscellaneous – Demonstration16 Miscellaneous – Ferry / Positioning17 News Gathering & Broadcasting18 Policy Compliance & Obtaining Legal Proof19 Public Services & Safety20 Security & Law Enforcement21 Remote Operations - Non-Sensing22 Remote Operations – Sensing23 Research & Science24 Transport25 Utility Companies (Public & Private)

General Comprehension of U-Space

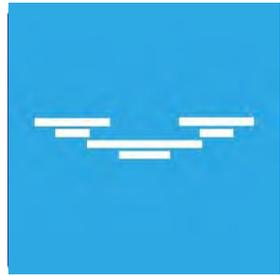

Is the general concept of U-space clear to you?	1%	3%	22%	46%	28%
Are the relations between the service suppliers clear to you?	4%	12%	27%	45%	11%
Is it clear what data is supplied by each service provider?	7%	10%	41%	34%	7%
Is it clear in what format the data is supplied?	21%	16%	46%	16%	2%
Is it clear to whom the data is supplied?	11%	12%	40%	30%	7%
Is it clear how the data is supplied?	18%	11%	48%	20%	2%
Are the legal responsibilities & liabilities of the service providers clear to you?	15%	13%	43%	23%	6%
Is 5G coverage in your country sufficient to supply the data?	27%	25%	30%	15%	2%

Services Currently Available in Respondent's Country (> 40% of positive replies)

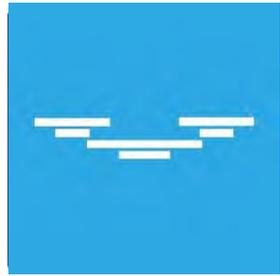

Common Information Service (CIS)	ATM Data Service Flight planning Geo-Awareness Data Service	55% 53% 47%
UAS Flight Authorisation Service	Flight plan/authorisation validation	47%
Geo-awareness Service	Applicable operational conditions Airspace constraints in designated U-space airspace Geographical zones in the designated U-space airspace	46% 42% 41%
Network Identification Service	Data for authorized users	69%
Traffic Information Services		40%
Weather Information Services		61%

Preference & Expression of Needs (> 50% of respondents)

● Prefer Integration to Segregation	76%
● Need for further specifications of rules & guidelines in the U-space regulation (e.g. de-conflicting processes)	83%
● Need for clarification of the roles & responsibilities of Air Navigation Service Providers, Common Information Service Providers, U-space Service Providers	64%
● Business & financial aspects of U-space should be referred to in the regulation	53%
● Business & financial aspects of U-space should be a national implementation matter	50%

Maturity - Comprehension

Maturity & Information Sufficiency

The majority of respondents indicate that the **U-space is not mature** and that the **available information/documentation** is **insufficient**.

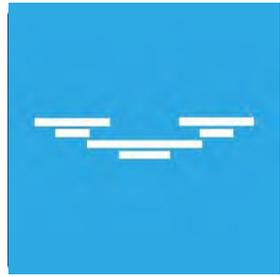

Above Average & Total Comprehension

- The U-space concept **74%**
- Relations between service suppliers **56%**
- Data supplied by each service provider 41%
- To whom the data is supplied 37%
- Legal responsibilities & liabilities of service providers 29%
- How the data is supplied 22%
- Format of the supplied data 18%

The 10 Most Urgently Required Services

- Flight Authorisation Request Processing **56%**
- Geographical Zones in the Designated U-space Airspace 48%
- Geo-Awareness Data Service 47%
- Authorization Request Service 45%
- Applicable Operational Conditions 45%
- Supply of Flight Authorisation 44%
- Flight Plan/Authorisation Validation 42%
- Airspace Constraints in the Designated U-space Airspace 42%
- Weather Information Service 42%
- Dynamic Airspace Restrictions 40%

Majority of respondents (>50%) **do not know when the required services will be available** in their countries.

Principal Currently Missing Information

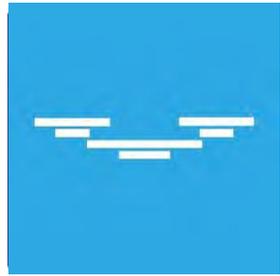

> 50% of respondents

- Required technical standards	73%
- Required operational standards	69%
- Detailed additional information on U-space	62%
- Detailed additional regulatory information	57%
- Costing aspect of U-space services	56%
- Responsibilities & liabilities relative to U-space services	55%

< 50% of respondents

- Definition of «dynamic reconfiguration of the airspace» concept	48%
- Defined communication interface between ANSP & USSP	38%
- Defined communication interface between CSP & USSP	37%
- Defined communication interface between CSP & ANSP	35%
- Definition of «Notified Body» & applicable criteria/standards	28%

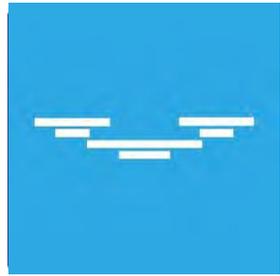

Immature or Non-Exist Technology & Principal Required Standards

Concepts considered to be based on immature or non-existent technologies	
- Detect & Avoid	80%
- Collaborative interface with ATC	51%
- Surveillance & communication technology for manned aviation VLL flights	51%
- Dynamic geo-fencing	47%
- Tactical de-confliction	47%
- Communication methods – 5G	41%
- Procedural interface with ATC	40%
- Strategic de-confliction	40%

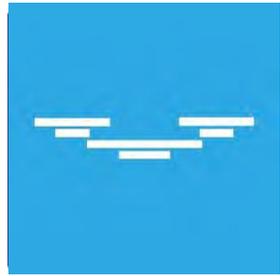

Principal required European-wide standards	
- Pilot Training & Qualification: Theoretical	85%
- Detect & Avoid	84%
- Electronic conspicuity methods (UAS position transmission)	82%
- Pilot Training & Qualification: Practical	81%
- Command & Control integrity	78%
- Cybersecurity	78%
- Drones for Transport - Cargo/Goods	77%
- Drones for Transport – Persons	76%
- Population density definition/calculation	67%
- UAS «black box» recorder (on aircraft)	60%
- Person-identifiable imagery	55%

Opinions Expressed on the Current Situation

	No
Is the currently available U-space information (Reg. Draft) sufficient to evaluate the impact on your future activities ?	59%
Is the currently available regulatory information sufficient to evaluate the impact on your future activities ?	66%
Is the currently available U-space information (Reg. Draft) sufficient to draw up a business plan/commercial strategy ?	58%
Is the currently available regulatory information sufficient to draw up a business plan/commercial strategy ?	57%
Is the information on U-space currently available (Reg. Draft) sufficient to implement U-space ?	59%
Is the information on U-space currently available (Reg. Draft) a solution for your future activities ?	49%

Opinions Expressed on Standards

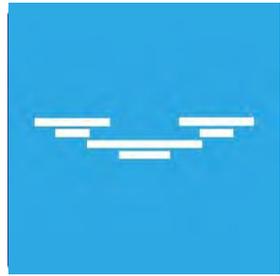

Respondents **desiring to be involved in ongoing standards work**

Data Exchange Standards	55%
Remote Identification Standards	60%
Electronic Registration Standards	56%

GENERAL COMMENTS

	Yes	No	?
● Is your national standards organisation involved in the drone standards producing activity (for the «open» category) by ASDSTAN?	21%	23%	56%
● Is your national standards organisation involved in the drone standards producing activity by ISO?	31%	19%	50%
● Are the standards that your company/organisation requires available?	31%	39%	31%
● Are the standards that your company/organisation requires easily identifiable/findable?	28%	44%	28%
● Are the standards that your company/organisation requires available in your local language?	20%	43%	37%

Opinions Expressed on Standards

DO THE STANDARDS FOR THESE SERVICES **EXIST IN YOUR COUNTRY?**

Common Information Service (CIS)

- ATM Data Service
- Geo-Awareness Data Service
- Authorization Request Service
- Communication Service (infrastructure)
- Conformance Monitoring Service

UAS Flight Authorisation Service

- Flight authorisation request processing
- Flight plan assistance
- Flight plan processing
- Flight plan/authorisation validation
- Priority management
- Strategic de-confliction
- Supply of flight authorisation

Geo-awareness Service

- Applicable operational conditions
- Airspace constraints in designated U-space airspace
- Geo-graphical zones in designated U-space airspace
- Dynamic airspace restrictions temporarily limiting the area in the designated U-space airspace

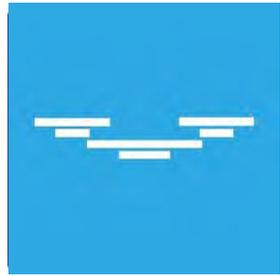

Network Identification Service

- Continuous processing of the remote identification of the UAS throughout the whole duration of the flight
- Remote identification of the UAS (Open category) to authorised users
- Data for authorized users

Traffic Information Service

Weather Information Service

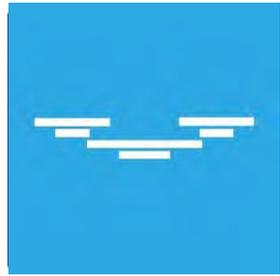

Opinions Expressed on Standards

STANDARDS ON FOLLOWING TOPICS ARE **SUGGESTED BY RESPONDENTS**

- Pilot Training & Qualification: Theoretical
- Pilot Training & Qualification: Practical
- Person-identifiable imagery
- Population density definition/calculation
- UAS «black box» recorder (on aircraft)
- Electronic conspicuity methods (UAS position transmission)
- Detect & Avoid
- Command & Control integrity
- Cybersecurity
- Drones for Transport - Cargo/Goods
- Drones for Transport - Persons

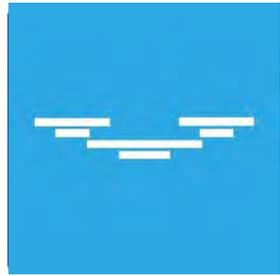

Opinions Expressed on Standards

ADDITIONAL STANDARDS SUGGESTED BY RESPONDENTS

- Accident/incident reporting
- All 30 UTM services in ISO 23629-12
- Area of Buffer dynamic calculation
- ATS/ATC service provided by ANSP to UAS/U-space entities
- ATM/UTM communications
- ATM/UTM contingency management
- Cross-border Interoperability (avoiding national implementations)
- Data exchange from different sources
- Drone-to-Drone communication
- Drone-to-Infrastructure Communication

- E-Insurance Card
- E-Pilot Licence
- GNSS use for drones (in particular EGNOS)
- Human-Autonomy Teaming & Human-Machine Interactions
- Night operations ie. Lights
- Radio emission power
- SMS communications
- Surveillance observation
- System design
- UTM integration

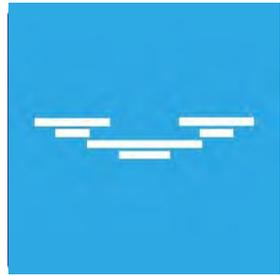

Opinions Expressed on Standards

**IS THERE A REQUIREMENT FOR THE FOLLOWING STANDARDS
CURRENTLY UNDER CONSIDERATION BY **ISO 23629-12**
(Yes / No / No Opinion)**

- Collaborative Interface with ATC (CIA)
- Dynamic (airspace) Capacity Mgt (DCM) Service
- Tactical Conflict Management Service (TCM)
- Communication Coverage Information Service (CCI)
- Electro-Magnetic Interference Inform. Service (EMS)
- Geospatial Information Service (GIS)
- UTM Communication Service (LCS)
- UTM Route Design Service (URD)

- Navigation Coverage Information Service (NCI)
- Population Density Information Service (PDI)
- Procedural Interface with ATC (PIA)
- Accident and Incident Reporting Service (ARS)
- Digital Logbook Service (DLB)
- Maintenance Management (MMN)
- Operational Plan Preparation (OPP)
- Risk Analysis Assistance (RAA)

NOTE: All respondents also indicated, standard-by-standard, if they were interested to be involved in the relevant standards creating work.

Opinions Expressed on Geo-Zones & E-Registration

Have geo-zones been established in your country?	Yes: 65% No: 14% Do not know: 21%
Do you know where to find the existing geo-zones?	Yes: 62% No: 18% Do not know: 19%
Are all geo-zones in your country managed by the same entity?	Yes: 39% No: 32% Do not know: 29%

80% of the respondents indicate that **E-registration is available in their country.**

61% indicate that **E-registration is free-of-charge.**

The **minimum age** is principally 16 or 18 years.

France, Italy & Spain have **3 classes**: 14, 16 & 18 yrs

Denmark has **2 classes**: 15 & 16 years

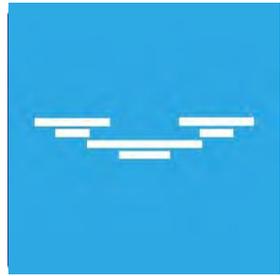

Germany has **2 classes**: 16 & 18 years

The responsibility for **management of the Geo-zones and Geo-awareness Service Provision** belongs to:

- National aviation authority 76%
- Governmental agency 38%
- Regional authority 25%
- Municipal authority 14%
- Independent company 14%

The majority of the respondents indicate that a **Geo-awareness Service Provider** should have a **designated accountable geo-awareness manager.**

AW DRONES

The Drone Standards Information Portal and future actions

Damiano Taurino

Deep Blue

Stratos Arampatzis

Ortelio Ltd

This project has received funding from European Union's Horizon 2020 Research and Innovation Programme under Grant Agreement No°824292.

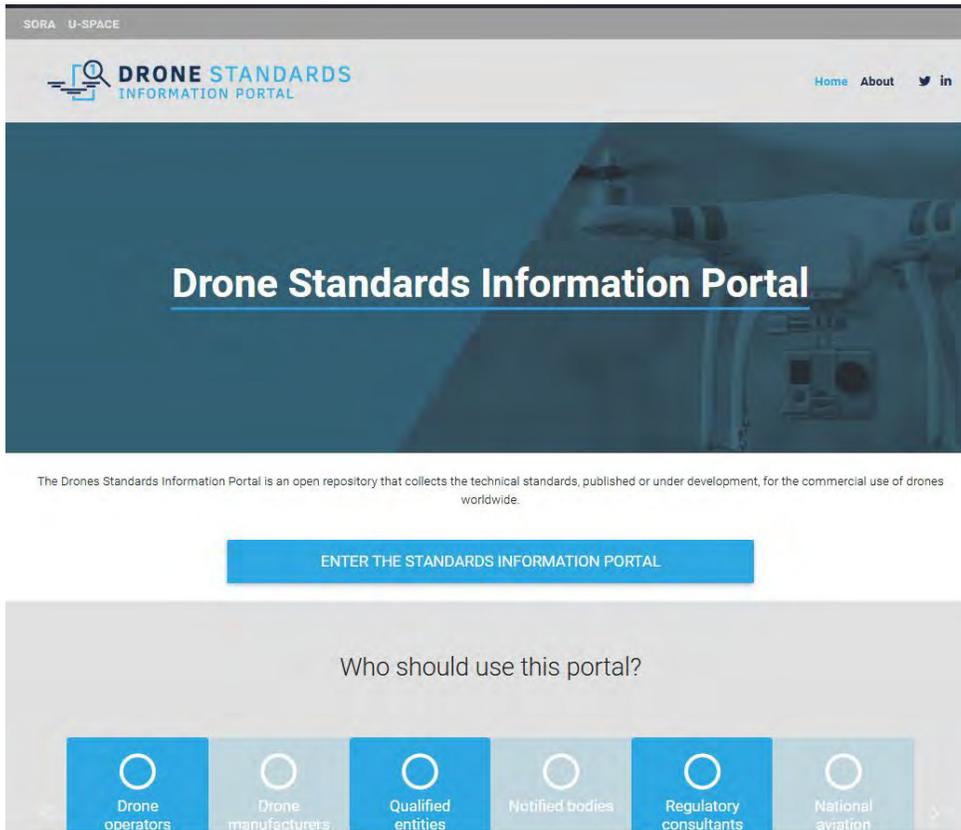

Online repository that provides single point of access to relevant information about:

- rules, procedures and technical standards developed for mass-market drones worldwide;
- best practices, gaps and bottlenecks;
- technical standard for each category of drone operations.

This data are communicated in a single point, user-friendly online platform which can be accessed freely and globally by any type of user:

<https://standards.aw-drones.eu/>

A renewed version of the Portal, with new functionalities, brand new graphical identity and better search tools is going to be released at the beginning of 2022!

- Better user support and a full user manual available for the visitors
- A brand new and responsive graphical identity
- Specific internal sections (SORA, U-Space, SC-Light UAS)
- Easier access to the information (more intuitive search, less clicks to reach your information)

The portal is a “live creature” driven by your needs, do not hesitate to share your impressions with us!

What's going on with the project?

AW-Drones will officially end this year (between Christmas at New Year's Eve), but....

A lot of things are still ongoing, including:

- Finalisation of the project's last outcomes and deliverables;
- Preparation and launch of the new Information Portal (it will be maintained after the end of the project!)
- Creation of an interactive platform to collect the contribution of the portal users (You!)

Keep in touch, AW-Drones' journey is coming to an end, but there is still a lot of work to do with drone standards!!!

Stratos Arampatzis
sa@ortelio.co.uk

Damiano Taurino
damiano.taurino@dblue.it

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

WEBINAR POLL

94 of 162 Attendees Responded

In your opinion, which of the following factors would foster the development of the drone business more

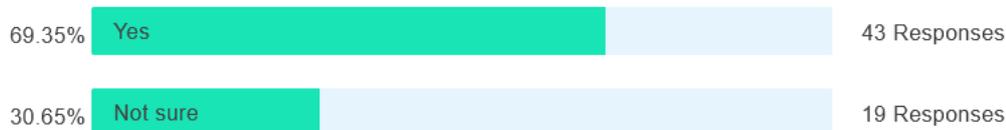

Multiple choice with multiple answers

62 of 162 Attendees Responded

Would you say that AW-Drones reached its objective (contributing to the harmonisation of EU drone regulations and standards)?

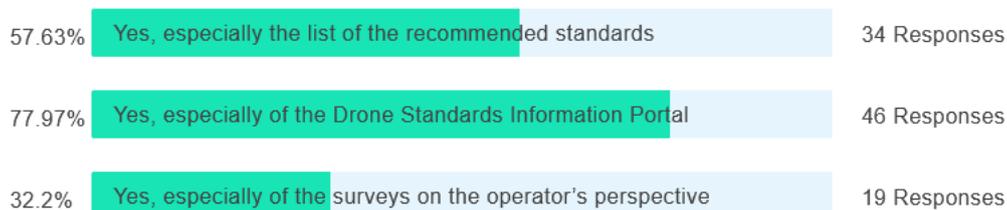

Multiple choice with single answer

59 of 162 Attendees Responded

Would you say that you will make use of the AW-Drones outcomes?

Multiple choice with multiple answers

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

Feedback On The Webinar

Question	Satisfaction Rate 1 Low - 5 High
Were the objectives of the event explained clearly in advance?	4,52
Were you satisfied with the overall quality of presentations?	4,44
Were you satisfied with the supporting material provided (agenda, posters, presentations...)?	4,28
Was the schedule appropriate to the event?	4,48
Did the design of the event facilitate interaction with the speakers and the provision of feedback?	4,16
How was the quality of the assistance during the event?	4,52
Overall, how suitable was the streaming tool used (GoToWebinar)?	4,48
What is your overall level of satisfaction in having participated in this event?	4,48
Would you recommend participating in future AW-Drones events to a colleague?	4,48

What aspects of the webinar did you appreciate least, and why?

1	A more proficient coordination from the main speaker would have been better
2	There was no time allocated to a discussion amongst the stakeholders on the project results
3	More specific data is needed
4	Too much information on procedures and not on lessons, orientations, trends and practical conclusions
5	Very minor: some presentations were not fully displayed but it was ok, and agenda in advance missing (it seems to me but maybe I missed it)

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

QUESTION RECEIVED FROM THE AUDIENCE ON THE WEBINAR CHAT

- Q: Do you have evidence that the identified standards were already really accepted as acceptable means by a CAA for a specific safety objective in the SORA process?
Thank you and best regards. [Christoph Wieland]
- A: When we started no standard was already accepted by any CAA. Now there are some that can be recommended and as soon as EASA will publish the list they will be accepted
- Q: Question to Mr Ducci!: How many European drone manufacturers are involved in the project? Do you plan to review/amend the project considering that in the last 2 years we have had a lot of new drone manufacturers from the EU? Is your project mainly for the purpose of the EU or is it an international project? [Adrian Haxhiaj]
- A: The project will finish in two weeks, so there is no plan to involve other manufacturers. During the project manufacturers covering more than 90% of the EU market were involved. They were not all EU manufacturers as most of the drones sold in EU are developed elsewhere. The project aimed at addressing the EU regulatory requirements only but standards developed worldwide were considered. The results of AW-Drones will be further reviewed by the Consortium that will win the tender EASA published a few months ago. So the question about the involvement of additional manufacturers will need to be asked to them when their name will be known.
- Q: Is UTM the US U-space? [Cengiz Ari]
- A: Yes, indeed. https://www.faa.gov/uas/research_development/traffic_management/
- Q: Have any service providers and/or on-board drone technology providers been involved in any way? [Réda Nouacer]
- A: Unify represented U-space providers in AW-Drones. Providers of on-board drone technology were not directly involved but they might have contributed through the Standard Design Organisations. However we don't have visibility on that.
- Q: Are there any training programs available for prospective operators?[Eraclis Foullis]
- A: There are many training programs available. I can recommend to look into the courses offered by <https://jaato.com/virtual-home/> and <https://trainingzone.eurocontrol.int/>
- Q: "A compilation of existing UAS regulations - Vanuatu, New Zealand, Australia, Canada and the U.S." – will the EU regulation also be considered in the compilation? [Cengiz Ari]
- A: Yes, it should be added to the compilation in the future
- Q: OK, does this mean that ICAO has already adopted some terminology in that area or is there still room for common naming convention?[Cengiz Ari]
- A: ICAO has been tasked to develop a regulatory framework by the Assembly
- Q: Just one minor remark: the presentations displayed by the participants seem to be truncated from time to time, and we cannot see all the words ... [Ségolite Sellem-Delmar]
- A: Thanks Ségolite, I noticed it, it's an issue with the screen resolution of the speaker projecting. All the presentations will be made available after the event, in any case!

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

Q: Just one minor remark: the presentations displayed by the participants seem to be truncated from time to time, and we cannot see all the words ... [Ségolite Sellem-Delmar]

A: Sorry for this; all the presentations will be uploaded to the project website after the event, so you will be able to have another look at them.

Q: A lot of air-space possibilities were mentioned by the presenters, but agriculture was not mentioned at all. Is agriculture part of the topics that you address? Will there be separate handling of drones air-space for agricultural systems? [Victor Alchanatis]

Q: How does this Network function? [Stefan Hristozov]

Q: Will you explain during this presentation how the database will be maintained in the future «<https://standards.aw-drones.eu/standards>»? [Cengiz Ari]

A: Yes, indeed in the final presentation

Q: Do we get all slides from today? [Kellerhals Martin]

A: Yes, they will be published on the AW-Drones website: www.aw-drones.eu

Q: Ok, thanks a lot ! [Ségolite Sellem-Delmar]

A: Thanks to you Ségolite!

Q: Yes I can see it again [Jules Kneepkens]

A: Thanks!

Q: I've fixed it by refreshing the window [Stefan Hristozov]

A: Thanks!

Q: It is well displayed [Ségolite Sellem-Delmar]

A: Thanks!

Q: I could see the screen well [Nathalie Hasevoets]

A: Thanks!

Q: I had to reinstall the webinar! Now I see the presentation and partners [Ake Sivertun]

A: Thanks Ake!

Q: I can see the screen. It is possible to restart the webinar again and it works [Adrian Haxhiaj]

A: Thanks Adrian!

Q: Slide 5 visible, I confirm [Lionel Clarisse]

A: Thanks Lionel!

Q: Yes page 5 [Pedro Cunha]

A: Thanks Pedro!

Q: If you can't see the screen you must refresh the page. It is visible if you do that. [Sebastian Paolini Van Helfteren]

Is European aviation conquering the challenges of drones?

FINAL PUBLIC EVENT

7 DECEMBER 2021 - ONLINE

A: Thanks Sebastian

Q: I had to refresh my screen (connecting through Chrome) [Nicolas Eertmans]

A: Thanks Nicolas!

Q: I had to refresh the page in the navigator to remove the poll pop-up [Lionel Clarisse]

A: Thanks Lionel!

Q: Shouldn't we also work on cargo standards because those will be essential for an efficient integration in customer logistic systems (e.g. standard container sizes and attachment points etc.) [Jaap Hatzenboer]

A: Answer from Natale: Cargo standards exceed EASA competence since they are not safety related. This may anyway developed by industry and offered as best practices

Q: <https://www.eurocae.net/training/unmanned-aircraft-systems-airworthiness-and-safety-training/>[Christian Schleifer]

A: Thanks Christian!

Q: Thank you for the quality of the presentations which perfectly illustrate the complexity of the work carried out and the importance of the results obtained. I hope to meet you «physically» in the near future to work on a sequel to the AW-Drones project. [Réda Nouacer]

Q: Yes [Jules Kneepkens]

Q: Thanks for the webinar. I have to leave for another call. Looking forward to the slides [Jules Kneepkens]

Q: How long will the AW-Drones website still be up and running following the closure of the project? [Geert Vanhandenhove]

A: At list 2 years, we are now creating a plan to make it sustainable for a longer period (see last presentation)

Q: Yes [Giulio Traversa]

Q: Thank you very much for these excellent debriefs from all the presenters, and for AW-drones great job accomplished ! [Ségolite Sellem-Delmar]

Q: If not the full text of the standards, could be possible to have in the standard description a link to the original document or at least the publisher's site url? [Claudio Colangeli]

A: We are working to include the url of the publisher where the standard can be purchased.

Q: Have you also analyzed/ evaluated where standards overlap (or even contradict)? [Thorsten Indra]

A: Not really. If two standard overlap we currently recommended both of them. This kind of technical evaluation was out of scope for AW-Drones

Q: I am working on a project for large scale modular UAV transport over 30tonnes... who wants to participate? Any interest? Thanks Daniel Van Mosnenck

Q: Yes, especially of the Drone Standards Information Portal [Giulio Traversa]

The information contained herein is of a general nature and is not intended to address the circumstances of any particular individual or entity. This document is for information purposes only. Although every effort has been made to provide accurate and timely information, there can be no guarantee that the information contained herein is accurate as of the date it is received or that it will continue to be accurate in the future. No one should act upon such information without appropriate professional advice after a thorough examination of the particular situation.

Acknowledgement: The survey respondents indicated in Annex 1 are wholeheartedly thanked for their contributions.

This document may be circulated, copied, quoted or otherwise reproduced without prior approval, provided AW Drones is acknowledged as the source. For more information on the AW Drones Project: www.aw-drones.eu

SCOPE & PURPOSE

The objective of the UAS OPS and OPS RISK surveys is to:

- Consult only European drone operators (*ECAC countries*) conducting flight missions in order to increase the validity & pertinence of the results.
- Identify the European drone operator community to the regulatory and standards communities, as well as to itself.
- Apply an operation centric approach (not make a distinction between on the drones used based on airframe type, size, mass, or propulsion).
- Identify the drone operators by:
 - a) Category of operation: Commercial and/or non-commercial
 - b) Type of operator:
 - Corporate entity: Drone manufacturer & operator
Drone operator
Flight school
Research organisation
Test & demonstration site management
U-Space service provider
 - Governmental entity: Drone operator
Drone research organisation
 - Academia
 - Non-governmental entity (NGO)
- Identify the market sectors where non-military drone operations are currently taking place (*25 selections proposed*).
- Identify the flight missions currently being conducted (*33 selections proposed*).
- Concentrate on flight missions with the following operational parameters:
 - a) VLOS, EVLOS & BVLOS
 - b) Flight Altitude: < 500 ft
 - c) Over densely and/or sparsely populated areas.
- Identify the evolution of the market sectors and the flight missions that are anticipated to take place in the near term (*1 to 2 years starting on 1st January 2021*).
- Indicate in which market sectors and for which flight missions BVLOS operations are anticipated to start or grow (*and will require the application of operation risk analysis*).
- Make a high level evaluation of the current comprehension and use of operation risk analysis methods.
- Based on the aforementioned points, identify & engage the drone operators with the expertise required to make a more detailed evaluation of the current use of SORA, and identify possibly associated difficulties, bottlenecks and gaps.
- Obtain information permitting to confirm the usefulness of the AW Drones “Open Standards Repository”.
- Contribute to promoting awareness of the AW Drones Project with the European Drone Operator community.

Overview of the Scope & Purpose of the UAS OPS & OPS RISK Surveys				
Designation	Applicability	Activity	Operation Parameters	
UAS OPS	Current Situation	Identify the market sectors where drone flight operations are currently taking place.	Control Distance: VLOS, EVLOS, BVLOS	D r o n e O p e r a t o r s E C A C C o u n t r i e s
	<i>(in compliance with applicable regulation)</i>	Identify the mission purposes of the flight operations currently taking place.		
	Near Future	Identify the market sectors where drone flight operations that are anticipated to take place (new EU drone regulation).	Overflown Areas: Densely or sparsely populated areas	
	<i>1-2 years Starting 1 Jan. 2021</i>	Identify the mission purposes of the drone flight operations that are anticipated take (new EU Drone regulation).		
Obtain limited high level feedback on current use of risk analysis methods permitting the qualification of the respondents for participation in the OPS RISK Survey .				
OPS RISK	Obtain more detailed feedback on the current use of SORA / Standard Scenarios / Predefined Risk Assessment and identify difficulties, bottlenecks & gaps .			

UAS OPS SURVEY

RESPONDENTS

Total Quantity	247 from 22 countries			
Countries (<i>in order of quantity of respondents - between brackets</i>)	France (64)	Belgium (34)	Germany (34)	Netherlands (30)
	Spain (23)	Italy (13)	Switzerland (10)	UK (10)
	Ireland (7)	Poland (5)	Finland (3)	Austria (2)
	Slovakia (2)	Ukraine (2)	Bulgaria (1)	Denmark (1)
	Estonia (1)	Greece (1)	Lithuania (1)	Portugal (1)
	Romania (1)	Serbia (1)		
Quality	Drone Operator (<i>nominally identified</i>)			
Category	Commercial Operators		188	
	Non-Commercial Operators		59	
Type	Corporate Entities (<i>6 sub-types</i>)		216	
	Governmental Entities		12	
	Research Organisation		5	
	Association Federation, Union, TechCluster		6	
	Academia		8	

CURRENT SITUATION

GENERAL

- 1 Drone operations are taking place in all proposed Market Sectors (*except "Policy Compliance & Obtaining Legal Proof"*).
 - 2 All proposed Flight Missions are taking place.
- ➔ See Tables 1 - 4 & Graphs 1 & 3 in the Annex 2.

COMMENTS

Market Sectors

- 1 The 10 principal Market Sectors represent 86% of the total of all drone activity.
- 2 The 10 Market Sectors with the lowest drone activity represent 6% of all conducted operations.

Flight Missions

The 10 principal Flight Missions represent 68% of the total of all possible flight missions.

Flight Envelopes

- 1 VLOS & EVLOS flights represent 59% of all flight missions.
- 2 41% of the respondents indicate that they conduct BVLOS missions (*besides VLOS & EVLOS*).

Flight Zones

- 1 9% of the missions flown are over densely populated areas.
- 2 45% of the flight missions are over sparsely populated areas.
- 3 46% of the respondents indicate that their missions are over densely & sparsely populated areas

CONCLUSIONS

- 1 The replies demonstrate a wide recognition of the perceived potential benefits of drone use (*commercial & non-commercial*) by corporate and governmental operators.
- 2 The replies are indicative of an immature market and illustrate the Market Sectors where drone-related job creation is starting to taking place.

NEAR-FUTURE (1-2 YEARS)

GENERAL

- 1 It is anticipated that drone flight operations will be conducted in all proposed Market Sectors.
 - 2 All proposed Flight Missions will be taking place.
- ➔ See Tables 5-8 & Graphs 2 & 4 in the Annex 2.

COMMENTS

Market Sectors

- 1 It is anticipated that the percentage of drone flight operations taking place in the 10 principal current Market Sectors will decrease from 86% to 79%, which indicates that there is more activity in the other Market Sectors.
- 2 “Aerial Photography, Audio Visual Production, Advertising” has exchanged first position with “Construction & Real Estate”. “Mining & Exploration” has replaced “Cinema & TV Industry” in the tenth position.
- 3 The activity volume in the following Market Sectors is anticipated to change as indicated:
 - Maintenance Stable
 - Agriculture, Fishery, Fish Farming, Forestry + 26%
 - Research & Science + 9%
 - Flight Training & Instruction» + 12%
 - Construction & Real Estate» - 26%
 - Security & Law Enforcement» Stable
 - Public Services & Safety» Stable
 - Environmental Protect. & Wildlife Conserv. - 17%

Flight Missions

- 1 The quantity of flight missions represented by the top ten is anticipated to remain stable.
- 2 The designation of the anticipated ten most conducted flight missions is relatively stable. However, it is foreseen that “Broadcasting” will be replaced by “Mapping”.

Flight Envelopes

It is anticipated that the quantity of operators conducting operations with the following Flight Envelopes will change as indicated:

- VLOS - 44%
- VLOS & EVLOS + 17%
- VLOS & EVLOS & BVLOS + 66%
- EVLOS - 12%
- VLOS & BVLOS + 50%
- BVLOS + 16%
- EVLOS & BVLOS - 15%

Flight Zones

- 1 The quantity of drone operators concentrating on operations over densely populated areas is anticipated to remain relatively stable.
- 2 Logically, the anticipated decrease (- 27%) of drone operators concentrating only on flight operations over sparsely populated areas will translate into an increase (+ 27%) of drone operators conducting operations over both densely and sparsely populated areas.

CONCLUSIONS

- 1 The survey respondents anticipate an evolution from VLOS & EVLOS flights to BVLOS flights (61%), but VLOS & EVLOS flights will continue to be of interest for a significant number of applications (39%).
- 2 Consequently, the use of safety risk analysis methods will become increasingly important to a steadily growing number of drone operators.
- 3 This increase in BVLOS flights will create an increase in demand for services from flight training schools (+12%) and flight training sites.

SAFETY RISK ANALYSIS METHODS

GENERAL

- ➔ See review of survey results in Table 9 in the Annex 2.

COMMENTS

- 1 The existence of the SORA is generally known, but only 53% of the respondents indicate they have read SORA.
- 2 76% of the respondents indicate that they have read the English edition, and 24% indicate that they have read an edition translated into their national language.
Note: The question should be asked if unreliable/inaccurate web-based translations have been used?.
- 3 36% of the respondents indicated that the SORA guidelines have been translated into their national language by their National Aviation Authority (NAA). However, consultation with the relevant NAAs has brought to light that none of them have translated the SORA guidelines into their native languages.

- 4 In most cases, the respondents obtained the SORA guidelines from a source other than EASA, JARUS or their NAA.
- 5 49% of the respondents indicate that they master the SORA terminology.
- 6 64% of the respondents state that they understand the SORA methodology.
- 7 35% of the respondents state they currently use SORA, but only 23% state they have submitted a SORA to their NAA.
- 8 The respondents currently carry out an operation safety risk assessment by means of:
 - A process approved by their NAA 56%
 - A national standard scenario 12%
 - A Predefined Risk Assessment (PDRA) 7%
 - “Another method” 23%
- 9 14% of the respondents use an independent third party to undertake their safety risk assessments, namely
 - Qualified Entities 26%
 - Notified Bodies 3%
 - NAA-approved organisations/consultants 31%
 - Organisations/consultants not approved by NAA (31%)
- 10 92% of all respondents indicated that an online tool to guide them through the establishment of a SORA would be of interest to them and 65% of them preferred to have this tool in their national language.

CONCLUSIONS

- 1 The SORA guidelines are currently only used by a relatively small minority of the European drone operators.
- 2 The knowledge of and experience with SORA permitted to qualify only 14% of the UAS OPS respondents to receive an invitation to contribute to the OPS RISK survey. Only 8% actually completed the survey.
- 3 The use of risk assessment methods other than SORA (*e.g. nationally approved processes, national standard scenarios, predefined risk assessment*) currently has the preference of the majority of the drone operators.
- 4 The availability of the SORA guidelines in the national European national languages will, without any doubt, make the SORA methodology more accessible and understandable to many more operators.
- 5 The current situation (*SORA is only available in English - no official nor courtesy translations have been made by any NAA*) does not give the operators in each EU Member State an equal opportunity to understand and use the SORA guidelines, as the English language is not evenly mastered in all countries.

OPS RISK Survey

RESPONDENTS

Total Quantity	Invited:	Invited (after qualification): 34 (14% of the total)			
	Replied:	20 (8% of the total) from 12 countries			
Countries (in order of quantity of respondents - between brackets)		Belgium (3)	Italy (3)	Netherlands (3)	Bulgaria (2)
		Poland (2)	France (1)	Germany (1)	Ireland (1)
		Spain (1)	Sweden (1)	Switzerland (1)	UK (1)
Quality		Drone Operator (nominally identified)			
Category		Commercial Operators			75%
		Non-Commercial Operators			25%
Type		Corporate Entity - Drone Operator			35%
		Corporate Entity - Drone Manufacturer & Operator			25%
		Corporate Entity - Flight School			15%
		Corporate Entity - Research			15%
		Governmental Entity - Drone Operator			10%

GENERAL

- 1 The very low amount of (pre-qualified) respondents (8% of the total) clearly indicates that SORA is not widely understood & used.
 - 2 National Standard Scenarios (STS) and Predefined Risk Assessment (PDRA) and “other means” seem to be the preferred operation safety risk assessment methods.
- ➔ See Table 10 in the Annex 2.

COMMENTS

- 1 There is consensus relative to the interest of having a Light UAS Operator Certificate (LUC).
- 2 85% of the respondents indicated being conversant in English and understanding the SORA terminology.
- 3 On average, 91% of the respondents indicated to be aware of the requirements in their country relative security, privacy & data protection, environmental protection, and the use of the radio frequency spectrum.
- 4 55% of the respondents have drawn up a ConOps, used national standard scenarios and conducted a SORA.
- 5 On average, 70% of the respondents indicate that they can conduct a SORA for each of their missions and are capable of applying GRC and ARC mitigations.
Note: The respondents have a minimal understanding of the application of standards.
- 6 25% of the respondents have used a Predefined Risk Assessment, and only 10% have used an EU standard scenario.
- 7 20% of the respondents indicate that they can detect other aircraft in uncontrolled airspace.
- 8 80% of the respondents indicate that they report drone incidents.
- 9 Practically all respondents use third parties when required by the OSOs.
- 10 In the context of SORA, the highest score for standards used (25%) is attributed to EUROCAE.
- 11 The respondents indicate that they have experienced difficulties with the following:
 - Showing compliance with the safety objectives due to an absence of standards (or knowledge of the standards) 40%
 - Operational Safety Objectives (OSOs) 100%
 - Strategic mitigations 88%
 - Technical information to be obtained from the drone manufacturer 88%
- 12 The respondents indicated that their operations were associated with:

SAIL 1	20%	SAIL 2	40%	SAIL 3	25%	SAIL 4	5%
SAIL 5	5%	SAIL 6	5%	SAIL 7	5%	Not known	55%
- 13 The respondents indicated that they can currently demonstrate compliance up to the following levels:

SAIL 1	15%	SAIL 2	35%	SAIL 3	20%	SAIL 4	20%
SAIL 5	10%	SAIL 6	5%	SAIL 7	5%	Not known	45%

CONCLUSIONS

- 1 Whereas English is the “lingua franca” of the European and international aviation community, this is not the case in the European drone operator community (constituted by a majority of micro companies & SMEs/SMIs). There are wide variations in the English language competencies between the drone operators in the EU Member States. This situation could lead to unequal opportunities for drone operators in different countries, which in turn could have a

negative influence on the sector's job creation potential.

Note: The EU drone regulation does not impose a minimal level of English competency.

- 2 The possibility to access EU airspace should be equal for all qualified drone operators in all EU Member States. However, this is not the case when a large segment of the European drone operator community cannot grasp and comprehend the Acceptable Means of Compliance (AMCs) (e.g. *SORA*), because they have not been translated into the EU national languages. It is standard EASA procedure that the translation of AMCs into the national EU languages is left up to the discretion of the NAAs.

Note: ● If such documents are not made available to drone operators in their national languages, this could negatively impact the development of the EU drone market, as well as its job creation potential.

- In an ideal situation, making the referred to documents available in the EU national languages would be taken on by the national drone associations, but unfortunately they lack the resources for this task.

- 3 The NAAs of the EU Member States do not have the resources (*and possibly, in some cases, the translators with the necessary competence*) to undertake the task of translating AMCs, Guidance Material (GM) and other critical documents (e.g. the "*Easy Access Rules for UAS*") into their national language(s).
 - 4 The same difficulty will arise concerning the access to and comprehension of the required standards, as most Standard Developing Organisations (SDOs) only publish standards in English.
 - 5 In view of the aforementioned, it is anticipated that the use of independent third parties to conduct SORAs, and apply GRC mitigation & ARC mitigation strategies, will increase.
 - 6 The aforementioned reinforces the potential for online tools (*in the EU languages*) to facilitate the safety risk analysis procedures for drone operators.
 - 7 An additional reason for the anticipated increase in the demand for services by independent third parties (*Qualified Entities / Conformity Assessment Bodies / Notified Bodies*) is that the volume of work involved in the fields relative to Training, Airworthiness, Operations Manual qualification can only in some rare cases be taken on by the NAAs.
 - 8 Currently, the actual use of standards is minimal. The necessity to use standards will increase with the increase of drone operations in the specific category. Independent third parties can be expected to have access to the required standards, which implies that their clients (*drone operators*) would not have to purchase the standards from the SDOs.
 - 9 The identification by drone operators of the standards applicable (*partially or in their totality*) to a specific mission, in the context of:
 - Showing compliance with the safety objectives of a specific mission
 - Operational Safety Objectives (OSOs)
 - Strategic mitigationsis currently problematic for all drone operators.
- Note: The standards applicable to the open category are currently expected by December 2021.
- 10 Obtaining the required technical information from drone manufacturers is currently problematic for most drone operators. Manufacturers simply do not answer requests, or refuse to give the information.
 - 11 Practically all respondents indicate they have encountered difficulties with:
 - Complying with OSOs
 - Strategic mitigations
 - 12 On the average, 50% of the respondents do not know:
 - To what SAIL level their drone operations are associated.
 - Up to what SAIL level they can demonstrate compliance.
 - 13 80% of the respondents consider that the detection of other aircraft in uncontrolled airspace (< 500 ft) is currently impossible.

Concluding Remarks

- 1 The drone operators expect drone flight missions to increase in all market sectors. This increase is principally foreseen for BVLOS missions in the specific category. To make this possible and maintain, if not increase, the current volume of jobs in these market sectors, the following will have to be improved:
 - Grasp and comprehension of the applicable operational risk analysis methods;
 - Availability & acceptance of:
 - ◆ Independent third parties; and/or
 - ◆ Online tools to facilitate the safety risk analysis procedures;
 - Availability & comprehension of the required standards;
 - Availability of the required technical information from the relevant drone manufacturers/distributors;
 - Detection of other aircraft in uncontrolled airspace.
- 2 The AW Drones “Open Standards Repository” will facilitate the identification of applicable standards, which is going to be useful to:
 - English speaking drone operators,but also, and especially, for:
 - “Independent third parties” (*Qualified Entities / Conformity Assessment Bodies / Notified Bodies*), which will probably be growing in importance.

SURVEY SCOPE, OBJECTIVE & CONDITIONS

SURVEY ORGANISATION

This survey has been created and conducted by Blyenburgh & Co, a private company registered with the Chamber of Commerce in Paris, France, and established at 86 rue Michel Ange, FR-75016 Paris, France - Tel.: 33-1-46.51.88.65 - www.rps-info.com & www.rpas-regulations.com.

This survey was carried out in the context of the AW-Drones Project (www.aw-drones.eu), which is co-funded by the European Union (EU). Blyenburgh & Co is a participant in the AW-Drones Project.

SURVEY OBJECTIVE

The objective of this survey was to

- Evaluate the comprehension of U-space and its relevant services in the Single European Sky (SES) Member State area (and the knowledge level & the expectations of the stakeholders)
- Obtain an opinion on the technical standards required to support U-space implementation
- Identify possible bottlenecks & gaps
- Scope the possible pre-occupations of stakeholders concerning U-Space and its implementation
- Check on the U-space implementation status

COUNTRIES CONCERNED

This survey is aimed at the UAS / RPAS / Drone community principally in the following countries: Albania, Armenia, Austria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Faroe Islands, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Italy, Kosovo, Latvia, Lithuania, Luxembourg, Macedonia, Malta, Monaco, Montenegro, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Ukraine, United Kingdom.

Respondents in other countries were also invited to participate.»

NON-ATTRIBUTION OF RESPONSES

The survey responses supplied will not be nominally attributed to the companies/organisations having supplied them.

RECOGNITION OF CONTRIBUTION

A list of names of all companies & organisations having contributed to the survey, and the countries where they are established, is part of this final report.

PUBLICATION OF RESULTS

The conclusions of this survey are being made publically available on a no-cost basis to all interested parties. They are published on www.rps-info.com & www.aw-drones.eu.

DISSEMINATION

The notification of this survey and the invitations to contribute to it were disseminated by Blyenburgh & Co making use of its database and social media, as well as by specialized blogs (UAS Vision, Unmanned Airspace), and various UAS / RPAS / Drone community stakeholders

CONFIDENTIALITY

Personal contact information provided in response to this survey (hereinafter "Personal Data") will only be processed for the survey within the limits of the survey's purpose.

Data processing was performed by Blyenburgh & Co and its staff, which was instructed to observe the rules of this confidentiality clause.

Personal Data will not be transmitted to any entity for any purpose whatsoever. Persons having completed this survey may at all times request Blyenburgh & Co (pvb@rps-info.com) to have their Personal Data deleted from its database for any future use by addressing an email with "Delete from database" in the subject box, and indicating their family name, first name & company/organisation as the message text. Non-personal data shall not be subject to such deletion requests. Persons having supplied their contact details can, at all times, obtain a copy of the information concerning them that is registered by Blyenburgh & Co and rectify it by addressing a simple written request to Blyenburgh & Co, 86 rue Michel Ange, FR75016 Paris, France (pvb@rps-info.com).

This statement is in accordance with the EU General Data Protection Regulation (GDPR), which entered into force on May 15, 2018.

REFERENCE DOCUMENTS

For the convenience of the respondents, the following documents were accessible at each step of the survey:

- U-Space Insight Survey – Terms & Explanations - 210104
- EC Draft EU-923-2012 - SERA.6005 - U-space Amendment - 210303
- EC Draft EU-COM – Implementing Regulation – U-space Act - 210303
- EC Draft EU-COM – Implementing Regulation – U-space Act - Annex - 210303

TERMS & EXPLANATIONS

In the context of the “U-space Insight” survey the following terms and explanations apply.

UAS - (ICAO explanation)

“Unmanned Aircraft System” (UAS) is an aircraft and its associated elements which are operated with no pilot on board.

UAS Operator - (ICAO explanation)

“UAS Operator” is a person, organization or enterprise engaged in or offering to engage in an aircraft operation.

U-space - (SESAR JU explanation)

“U-Space” is a set of new services relying on a high level of digitalisation and automation of functions and specific procedures designed to support safe, efficient and secure access to airspace for large numbers of drones. As such, U-space is an enabling framework designed to facilitate any kind of routine mission, in all classes of airspace and all types of environment - even the most congested - while addressing an appropriate interface with manned aviation and air traffic control. The SESAR Joint Undertaking blueprint proposes the implementation of 4 sets of services to support the EU aviation strategy and regulatory framework on drones:

U1: U-space foundation services covering: e-registration, e-identification, and “pre-tactical” geo-fencing.

U2: U-space initial services for drone operations management: “tactical” geo-fencing, flight planning management, weather information management, tracking, monitoring, drone aeronautical information management, procedural interfacing with conventional air traffic control, emergency management, strategic de-confliction.

U3: U-space advanced services supporting more complex operations in dense areas such as de-confliction (assistance for conflict detection), dynamic geo-fencing, automated detect and avoid functionalities, collaborative interface with ATC, tactical de-confliction, dynamic capacity management.

U4: U-space full services, offering very high levels of automation, connectivity and digitalisation for both the drone and the U-space system.

UAS Geographical Zone - Source: Implementing Regulation (EU) 2020/639 (amending Implementing Regulation (EU) 2019/947), Article 2: Definitions, point (4) “UAS geographical zone” is a portion of airspace established by the competent authority that facilitates, restricts or excludes UAS operations in order to address risks pertaining to safety, privacy, protection of personal data, security or the environment, arising from UAS operations.

U-Space Services - Source: The most recent edition of the U-space draft

• **Network Identification Service**

A network identification service should provide the identity (registration number) of UAS operators and geo-location & serial number of UAS during operations

and in contingency situations, and share relevant information with other U-space airspace users.

• **Geo-awareness Service**

A geo-awareness service should provide UAS operators with the information about the latest airspace constraints and defined UAS geographical zones information made available as part of the common information services.

• **UAS Flight Authorisation Service**

A flight authorisation service should ensure that authorised UAS operations are free of intersection in space and time with any other notified flight authorisations within the same U-space airspace.

• **Traffic Information Service**

A traffic information service should alert UAS operators about other air traffic that may be present in proximity to their UAS.

• **Weather Information Service**

A weather information service should support the UAS operator during the flight planning and execution phases, as well as improve the performances of other U-space services provided in the U-space airspace.

• **Conformance Monitoring Service**

A conformance monitoring service shall enable the UAS operators to verify whether they comply with the operator requirements and the terms of the flight authorisation. To this end, it shall alert the UAS operator when the flight authorisation deviation thresholds are violated and when the operator requirements are not complied with by the same UAS operator.

Service Providers

There are two types of service providers:

Common Information Service Provider (CISP)

Member States may designate a single Common Information Service Provider (CISP) to supply the common information services on an exclusive basis in all or some of the U-space airspaces under their responsibility. The CISP will support the exchange of information and the coordination between U-space service providers and air traffic service providers, without discrimination, to enable the safe management of unmanned aircraft traffic and segregation of manned aircraft from unmanned aircraft.

U-space Service Provider (USSP)

U-space service providers will act as gateway with U-space for UAS operators, they will provide at least the following minimum mandatory U-space services: a network identification service, a flight authorisation service, a geo-awareness service, and a traffic information service. UAS operators subject to U-space regulation may only operate in U-space airspace if they use the mandatory U-space services that are indispensable to ensure safe, secure and efficient operations.

TARGETED PARTICIPANT CATEGORIES

- 1 **Aeronautical Information Service (AIS) Provider** (e.g. conformance monitoring, geo-awareness, flight authorisation, network identification, weather information)
- 2 **Air Navigation Service Provider (ANSP)**
- 3 **ATM/UTM/U-space software development companies** (not supplying services to UAS operators with the software developed by them)
- 4 **Common Information Service Provider (CISP)** (*Prospective*)
- 5 **Communication Service Provider** (e.g. mobile network, satellite communication)
- 6 **Conformity Assessment Body** (private or public, commercial or not-for-profit entity, national standards bodies, trade association, consumer organisations, organisations that undertake conformity assessment activities (e.g. testing, inspection, certification) in accordance with national regulations)
- 7 **Consultancy specialized in safety risk assessment** (SORA, PDRA, STS), and selling their services to UAS operators, and approved by their national aviation authority (NAA)
- 8 **UAS Manufacturer / Integrator**
- 9 **UAS Manufacturer / Integrator & Operator** [commercial – all aircraft types & all flight mission purposes].
- 10 **UAS Operator [commercial & non-commercial – all aircraft types - all flight mission purpose categories (except transport of cargo & persons)]**
- 11 **UAS Operator** [commercial & non-commercial – all aircraft types - **Transport of cargo & persons**]
- 12 **General Aviation (GA)** (manned aviation e.g. sport & leisure activities: pilots of balloons, gliders, ultralights; aerial work operators; business aviation; & related associations)
- 13 **Commercial Manned Aviation** [airlines (passenger & freight carriers; air taxi operators); pilots; related associations).
- 14 **National Aviation Authority (NAA)** - Regulatory authorities (ministry, directorate, CAA, inspectorate) - National & regional level
- 15 **Local Authority** (e.g. city/municipality, harbour) & regional authority (e.g. France: department; Germany: Länder; Spain: region; Italy: province/region; Netherlands: province)
- 16 **Notified Body** (organisation designated by EU country to assess product conformity)
- 17 **Qualified Entity (QE)** (an entity to which a specific certification task is allocated by and under control of a national aviation authority or EASA)
- 18 **Standard Development Organisation (SDO)** (national, European, international)
- 19 **Urban Air Mobility (UAM) service provider** (*Prospective*) [services (incl. infrastructure) required to make the transport of cargo & persons (air taxis) by unmanned aircraft possible in an urban environment]
- 20 **U-space Service Provider (USSP)** (*Prospective*) (supplying e.g.: network identification service, flight authorisation service, geo-awareness service, traffic information service)

CONCLUSIONS

SUMMARY OF THE PRINCIPLE RESULTS & CONCLUSIONS

- On the average, the survey **respondents** had significant **knowledge & understanding** of the drone sector (54% with >5 years of experience) and the aviation sector (83% with > 5 years of experience and 66% with >10 years of experience).
- 30% of the respondents are employed by companies/organisations with more than 250 employees. In other words, **70% of the respondents work in SMEs/SMIs**.
- The **principal contributing countries**: Belgium (13%) Germany (13%) France (12%)
Spain (10%) Netherlands (7%) Italy (7%)
- Publishing the survey in French, German & Spanish may have resulted in an **increase of 49% of the inputs** to the survey.
- The activity sector segmentation used to categorize the respondents has permitted to **benchmark the drone operations community** and to obtain a **representative & qualified insight** to the views of this community.
- The **top three respondent categories**: UAS Operators (35%)
Consultancy Specialized in Safety Risk Assessment (22%)
UAS Manufacturer/Integrator & Operator (19%).
- Less than 50%** of the respondents currently **contribute to standard producing work**.
- The activity sectors with the **largest projected growth**:
 - U-space Service Provider +12%
 - Urban Air Mobility Service Provider +9%
 - Consultancy specialized (safety risk assessment) +6%
 - UAS operator [commercial & non-commercial; All aircraft types - Transport of cargo & persons] +6%
 - UAS manufacturer / integrator & operator [Commercial - All aircraft types & flight missions] +5%
- Services currently available** in respondent's country (>40% of the positive replies):
 - Common Information Service (CIS)*
 - ATM Data Service 55%
 - Flight planning 53%
 - Geo-Awareness Data Service 47%
 - UAS Flight Authorisation Service 47%
 - Flight plan/authorisation validation 47%
 - Geo-awareness Service*
 - Applicable operational conditions 46%
 - Airspace constraints in designated U-space airspace 42%
 - Geographical zones in the designated U-space airspace 41%
 - Network Identification Service*
 - Data for authorized users 69%
 - Traffic Information Services 40%
 - Weather Information Services 61%
- Respondents' **preference** or **expression of needs**:
 - Prefer Integration to Segregation 76%
 - Need for further specifications of rules & guidelines in the U-space regulation (e.g. de-conflicting processes) 83%
 - Need for clarification of the roles & responsibilities of Air Navigation Service Providers, Common Information Service Providers, U-space Service Providers 64%
 - Business & financial aspects of U-space should be referred to in the regulation 53%
 - Business & financial aspects of U-space should be a national implementation matter 50%
- The majority of the respondents indicate that the **U-space is not mature** and that the **available information/documentation** is insufficient.
- Respondents with an **above average or total comprehension** of the following topics:
 - The U-space concept 74%
 - Relations between service suppliers 56%
 - Data supplied by each service provider 41%
 - To whom the data is supplied 37%
 - Legal responsibilities & liabilities of service providers 29%
 - How the data is supplied 22%
 - Format of the supplied data 18%
- The **10 most urgently required services**:
 - Flight Authorisation Request Processing 56%
 - Geo-graphical Zones in the Designated U-space Airspace 48%
 - Geo-Awareness Data Service 47%
 - Authorization Request Service 45%
 - Applicable Operational Conditions 45%
 - Supply of Flight Authorisation 44%
 - Flight Plan/Authorisation Validation 42%
 - Airspace Constraints in the Designated U-space Airspace 42%
 - Weather Information Service 42%
 - Dynamic Airspace Restrictions 40%
- The majority of respondents (>50%) **do not know when the required services will be available** in their countries.
- Principal currently **missing U-space-related aspects** are:
 - Required technical standards 73%
 - Required operational standards 69%
 - Detailed additional information on U-space 62%
 - Detailed additional regulatory information 57%
 - Costing aspect of U-space services 56%
 - Responsibilities & liabilities relative to U-space services 55%
 - Definition of «dynamic reconfiguration of the airspace» concept 48%
 - Defined communication interface between ANSP & USSP 38%
 - Defined communication interface between CSP & USSP 37%
 - Defined communication interface between CSP & ANSP 35%
 - Definition of «Notified Body» & applicable criteria/standards 28%

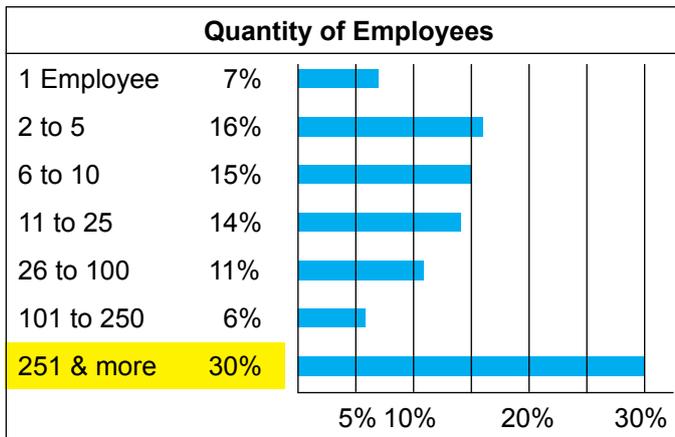

- The **principal concepts** that are considered **based on immature or non-existent technologies**:
 - Detect & Avoid 80%
 - Collaborative interface with ATC 51%
 - Surveillance & communication technology for manned aviation VLL flights 51%
 - Dynamic geo-fencing 47%
 - Tactical de-confliction 47%
 - Communication methods – 5G 41%
 - Procedural interface with ATC 40%
 - Strategic de-confliction 40%
- The **principally required European-wide standards**:
 - Pilot Training & Qualification: Theoretical 85%
 - Detect & Avoid 84%
 - Electronic conspicuity methods (UAS position transmission) 82%
 - Pilot Training & Qualification: Practical 81%
 - Command & Control integrity 78%
 - Cybersecurity 78%
 - Drones for Transport - Cargo/Goods 77%
 - Drones for Transport – Persons 76%
 - Population density definition/calculation 67%
 - UAS «black box» recorder (on aircraft) 60%
 - Person-identifiable imagery 55%
- 80% of the respondents indicate that **E-registration is available in their country**.
- 61% indicate that **E-registration is free-of-charge**.
- The **minimum age** is principally 16 or 18 years.
- France, Italy & Spain have 3 classes: 14, 16 & 18 years
Denmark has 2 classes: 15 & 16 years
Germany has 2 classes: 16 & 18 years
- 65% of the respondents indicated that **geo-zones had been established in their country**.
- The responsibility for **management of the Geo-zones and Geo-awareness Service Provision** belongs to:
 - National aviation authority 76%
 - Governmental agency 38%
 - Regional authority 25%
 - Municipal authority 14%
 - Independent company 14%
- The majority of the respondents indicate that a **Geo-awareness Service Provider** should have a **designated accountable geo-awareness manager**.

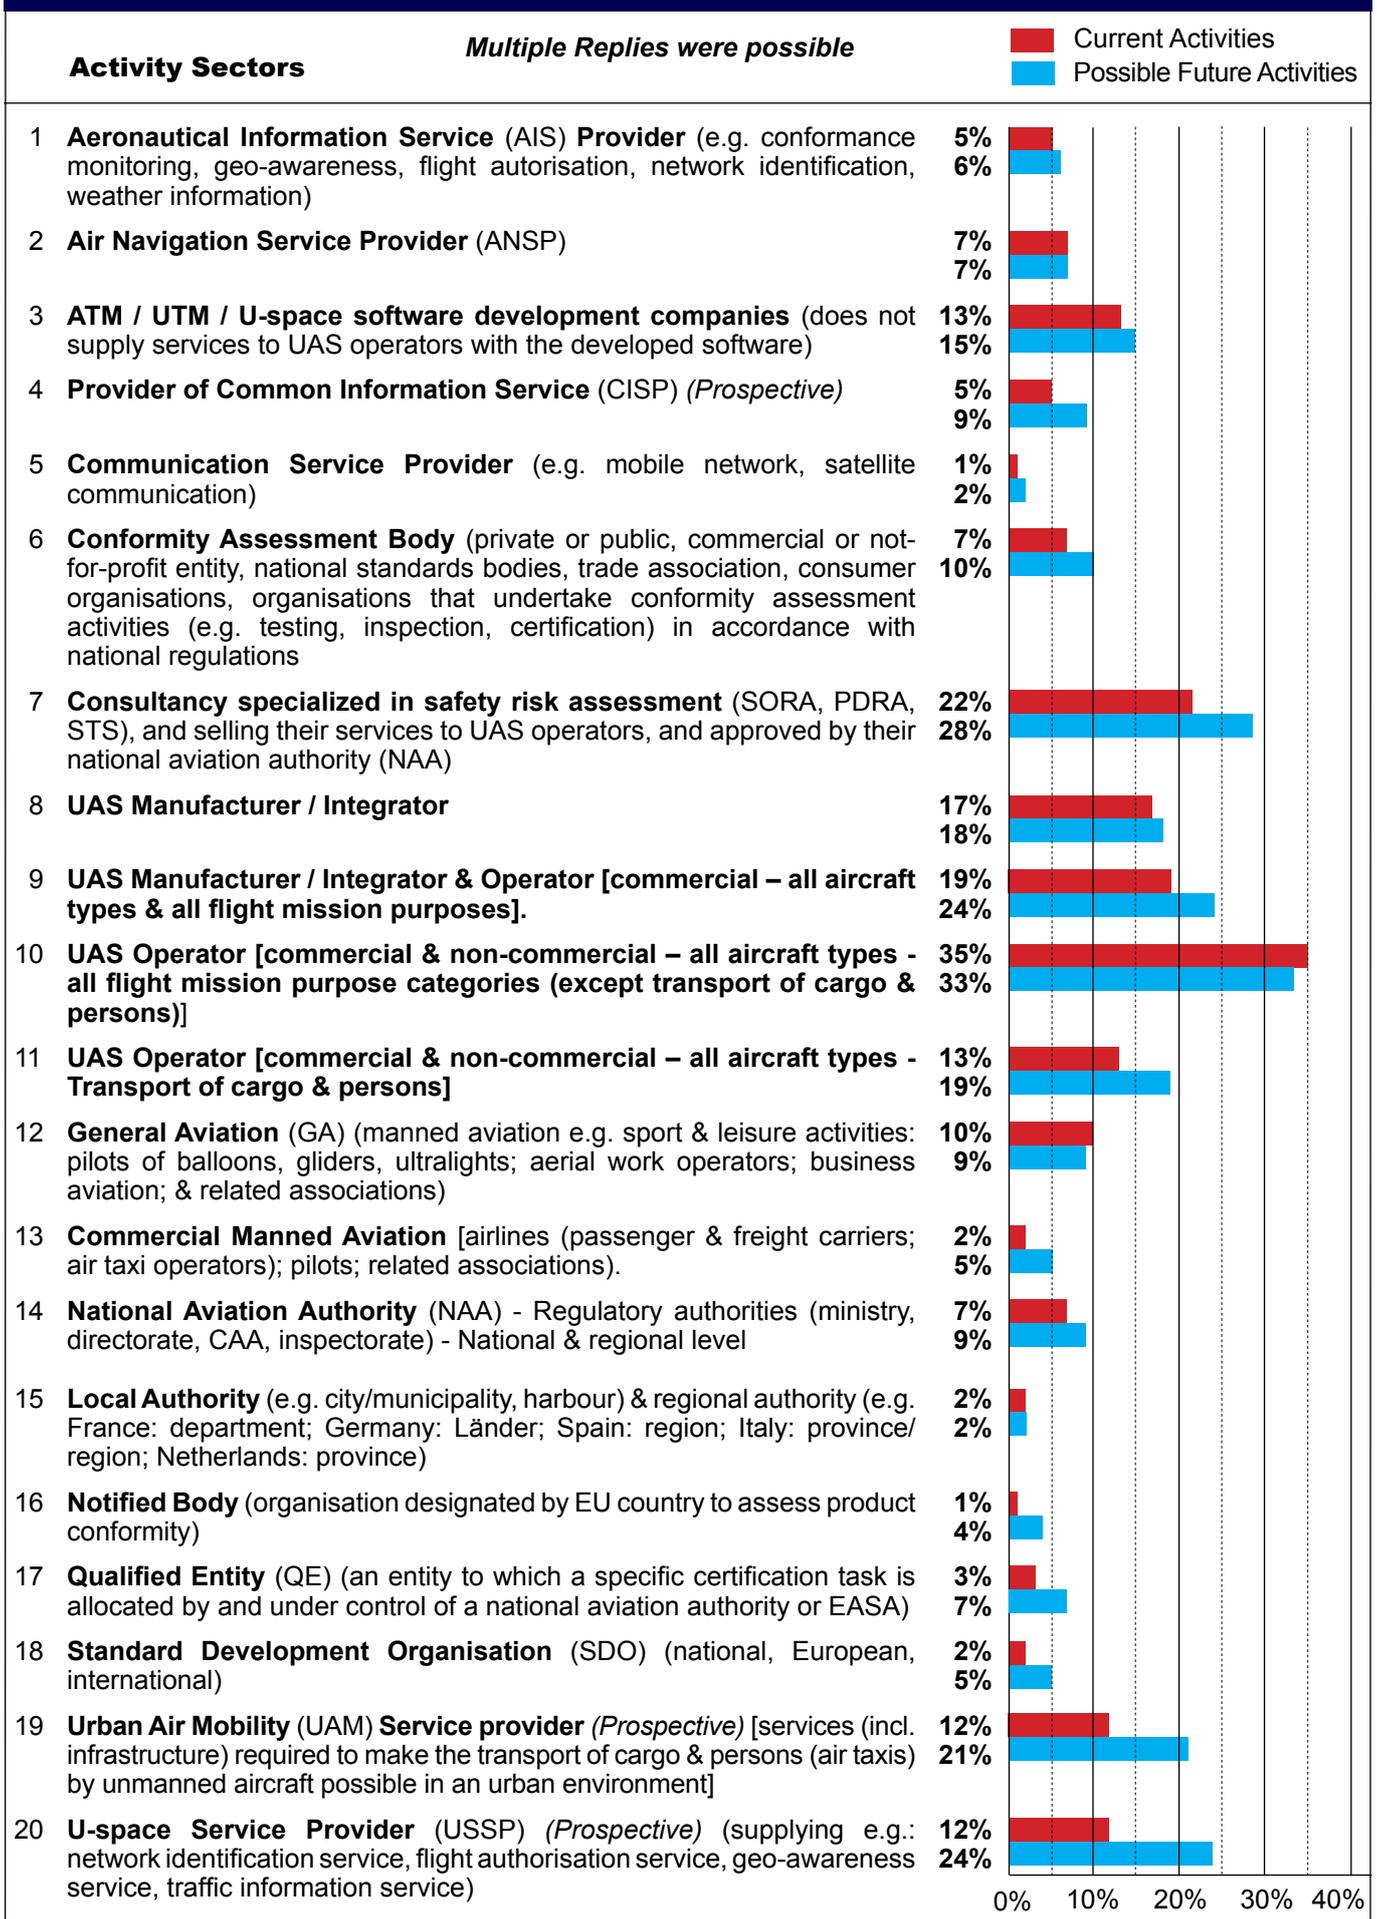

FIG. 6 - GENERAL COMPREHENSION

	Completely				
	Above Average				
	Partially				
	Slightly				
	Not at all				
Is the general concept of U-space clear to you?	1%	3%	22%	46%	28%
Are the relations between the service suppliers clear to you?	4%	12%	27%	45%	11%
Is it clear what data is supplied by each service provider?	7%	10%	41%	34%	7%
Is it clear in what format the data is supplied?	21%	16%	46%	16%	2%
Is it clear to whom the data is supplied?	11%	12%	40%	30%	7%
Is it clear how the data is supplied?	18%	11%	48%	20%	2%
Are the legal responsibilities & liabilities of the service providers clear to you?	15%	13%	43%	23%	6%
Is the 5G mobile network coverage in your country sufficient to supply the data?	27%	25%	30%	15%	2%

The following concerns 26% of the respondents

Why is U-space not clear to you?	
- Have not read all the relevant information	39%
- The U-space documents were not detailed enough	34%
- My English was insufficient to understand the documents	4%
- U-space documents were not available in my native language	3%
- Other (including no answer supplied)	20%

 12 Respondents interrupted the survey completion and did not resume it (not included in list above).
 5 Respondents submitted incorrect respondent information and were disqualified.

FIG. 9 - RESPONDENT ORGANISATIONS & RESPONDENTS - REVIEW

Respondent Experience (>5 years)

Organisation's involvement in drone sector	54%
Personal involvement with drones	60%
Personal involvement with aviation	83%

Quantity of Employees

1 - 25	52%
26 - 250	18%
<251 (SMEs/SMIs)	70%
>250	30%

Participating Countries

European Union	17
EU-associated	4
Other	7

Language Used to Complete Survey

English	67%
German	13%
French	12%
Spanish	8%

Respondents' Principal **CURRENT** Activities (>10%)

UAS Operator [commercial & non-commercial - all aircraft types - all flight mission purpose categories (<i>Except transport of cargo & persons</i>)]	35%
Consultancy specialized in safety risk assessment	22%
UAS Manufacturer / Integrator & Operator [commercial - all aircraft types & all flight missions]	19%
UAS Manufacturer / Integrator	17%
ATM / UTM / U-space software development companies	13%
UAS Operator [commercial & non-commercial - all aircraft types - <i>Transport of cargo & persons</i>]	13%
Urban Air Mobility (UAM) Service Provider	12%
U-space Service Provider	12%
General (Manned) Aviation	10%

Respondents' Principal **FUTURE** Activities (>10%)

UAS Operator [commercial & non-commercial - all aircraft types - all flight mission purpose categories (<i>Except transport of cargo & persons</i>)]	33%
Consultancy specialized in safety risk assessment	28%
UAS Manufacturer / Integrator & Operator [commercial - all aircraft types & all flight missions]	24%
U-space Service Provider (USSP)	24%
Urban Air Mobility (UAM) Service Provider	21%
UAS Operator [commercial & non-commercial - all aircraft types - <i>Transport of cargo & persons</i>]	19%
UAS Manufacturer / Integrator	18%
ATM / UTM / U-space software development companies	15%
Conformity Assessment Body	10%

COMMENTS

A significant majority of the survey participants had the required experience, expertise and competence.

70% of the respondents are Micro & Small/Medium-sized companies.

U-space is followed outside of the EU.

The majority of the survey participants (67%) master English.

Less than 50% of the survey respondents currently contribute to standard producing activities.

The activity sectors with the largest projected growth are:

- U-space Service Provider (USSP) +12%
- Urban Air Mobility (UAM) service provider + 9%
- Consultancy specialized in safety risk assessment + 6%
- UAS operator [commercial & non-commercial - all aircraft types - Transport of cargo & persons] + 6%
- UAS manufacturer / integrator & operator [commercial - all aircraft types & all flight missions] + 5%

COMPREHENSION

Percentage of the respondents indicating that they have an **above average** or **total** comprehension of the following:

The U-space concept	74%
Relations between service suppliers	56%
Data supplied by each service provider	41%
Format of the supplied data	18%
To whom the data is supplied	37%
How the data is supplied	22%
Relevant legal responsibilities & liabilities of service providers	29%

SERVICES

FIG. 10 - CURRENT AVAILABILITY IN RESPONDENT'S COUNTRY

Common Information Service (CIS)		Yes							
ATM Data Service	55%								
Geo-Awareness Data Service	47%								
Autorisation Request Service									
Communication Service (infrastructure for)									
Conformance Monitoring Service	27%								
UAS Flight Authorisation Service									
Flight planning	53%								
Flight autorisation request processing									
Flight plan assistance									
Flight plan processing									
Flight plan/autorisation validation	47%								
Priority management	18%								
Strategic de-confliction	16%								
Supply of flight authorisation									
Geo-awareness Service									
Applicable operational conditions	46%								
Airspace constraints in the designated U-space airspace	42%								
Geographical zones in the designated U-space airspace	41%								
Dynamic airspace restrictions temporarily limiting the area in the designated U-space airspace	26%								
Network Identification Service									
Continuous processing of the remote identification of the UA throughout the whole duration of the flight	23%								
Remote identification of the UA (Open category) to authorised users	23%								
Data (operator registration nr, unique serial number, geographical position & flight alt. of UA, route course, geographical position pilot or take-off point, UA emergency status, time stamp) for authorized users	69%								
Traffic Information Services		40%

FIG. 25 - STANDARDS - REQUIREMENTS

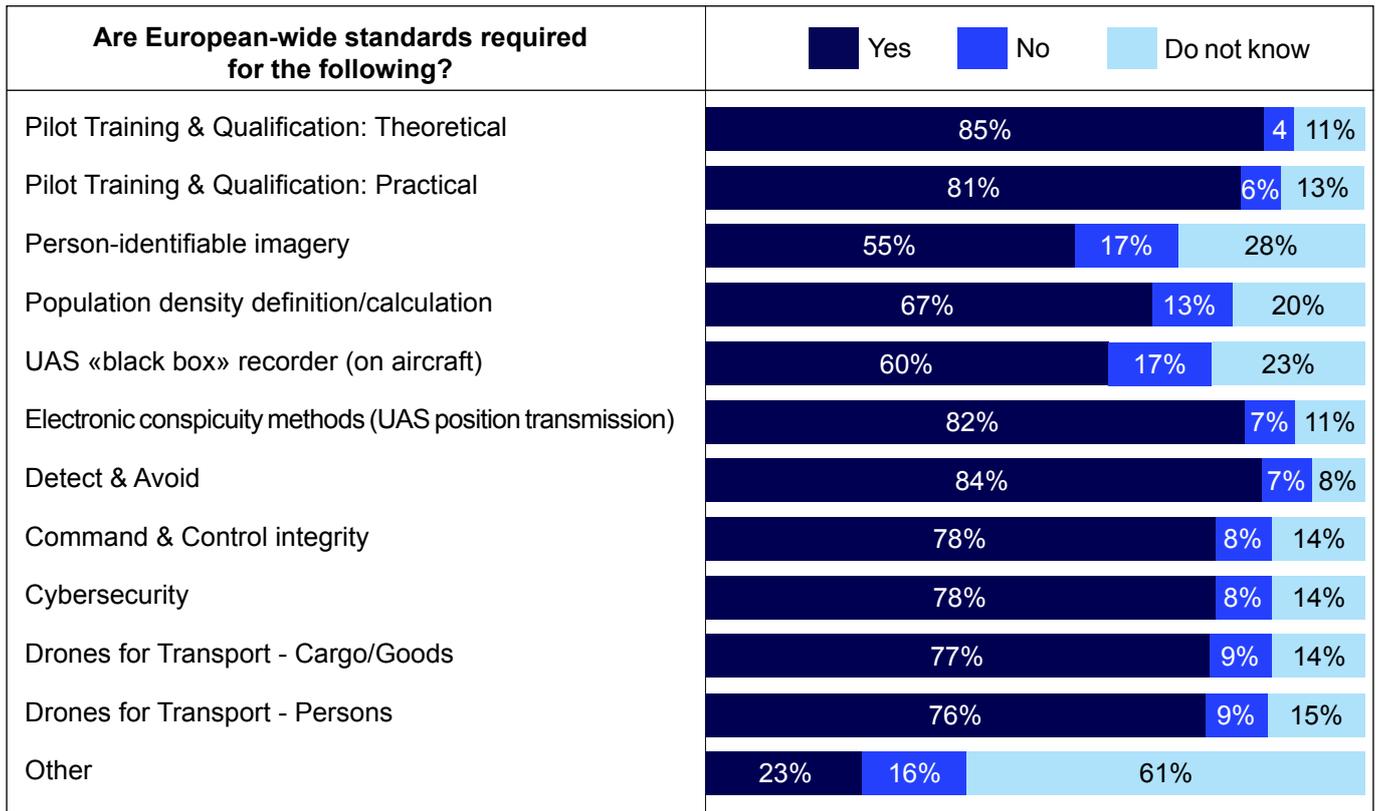

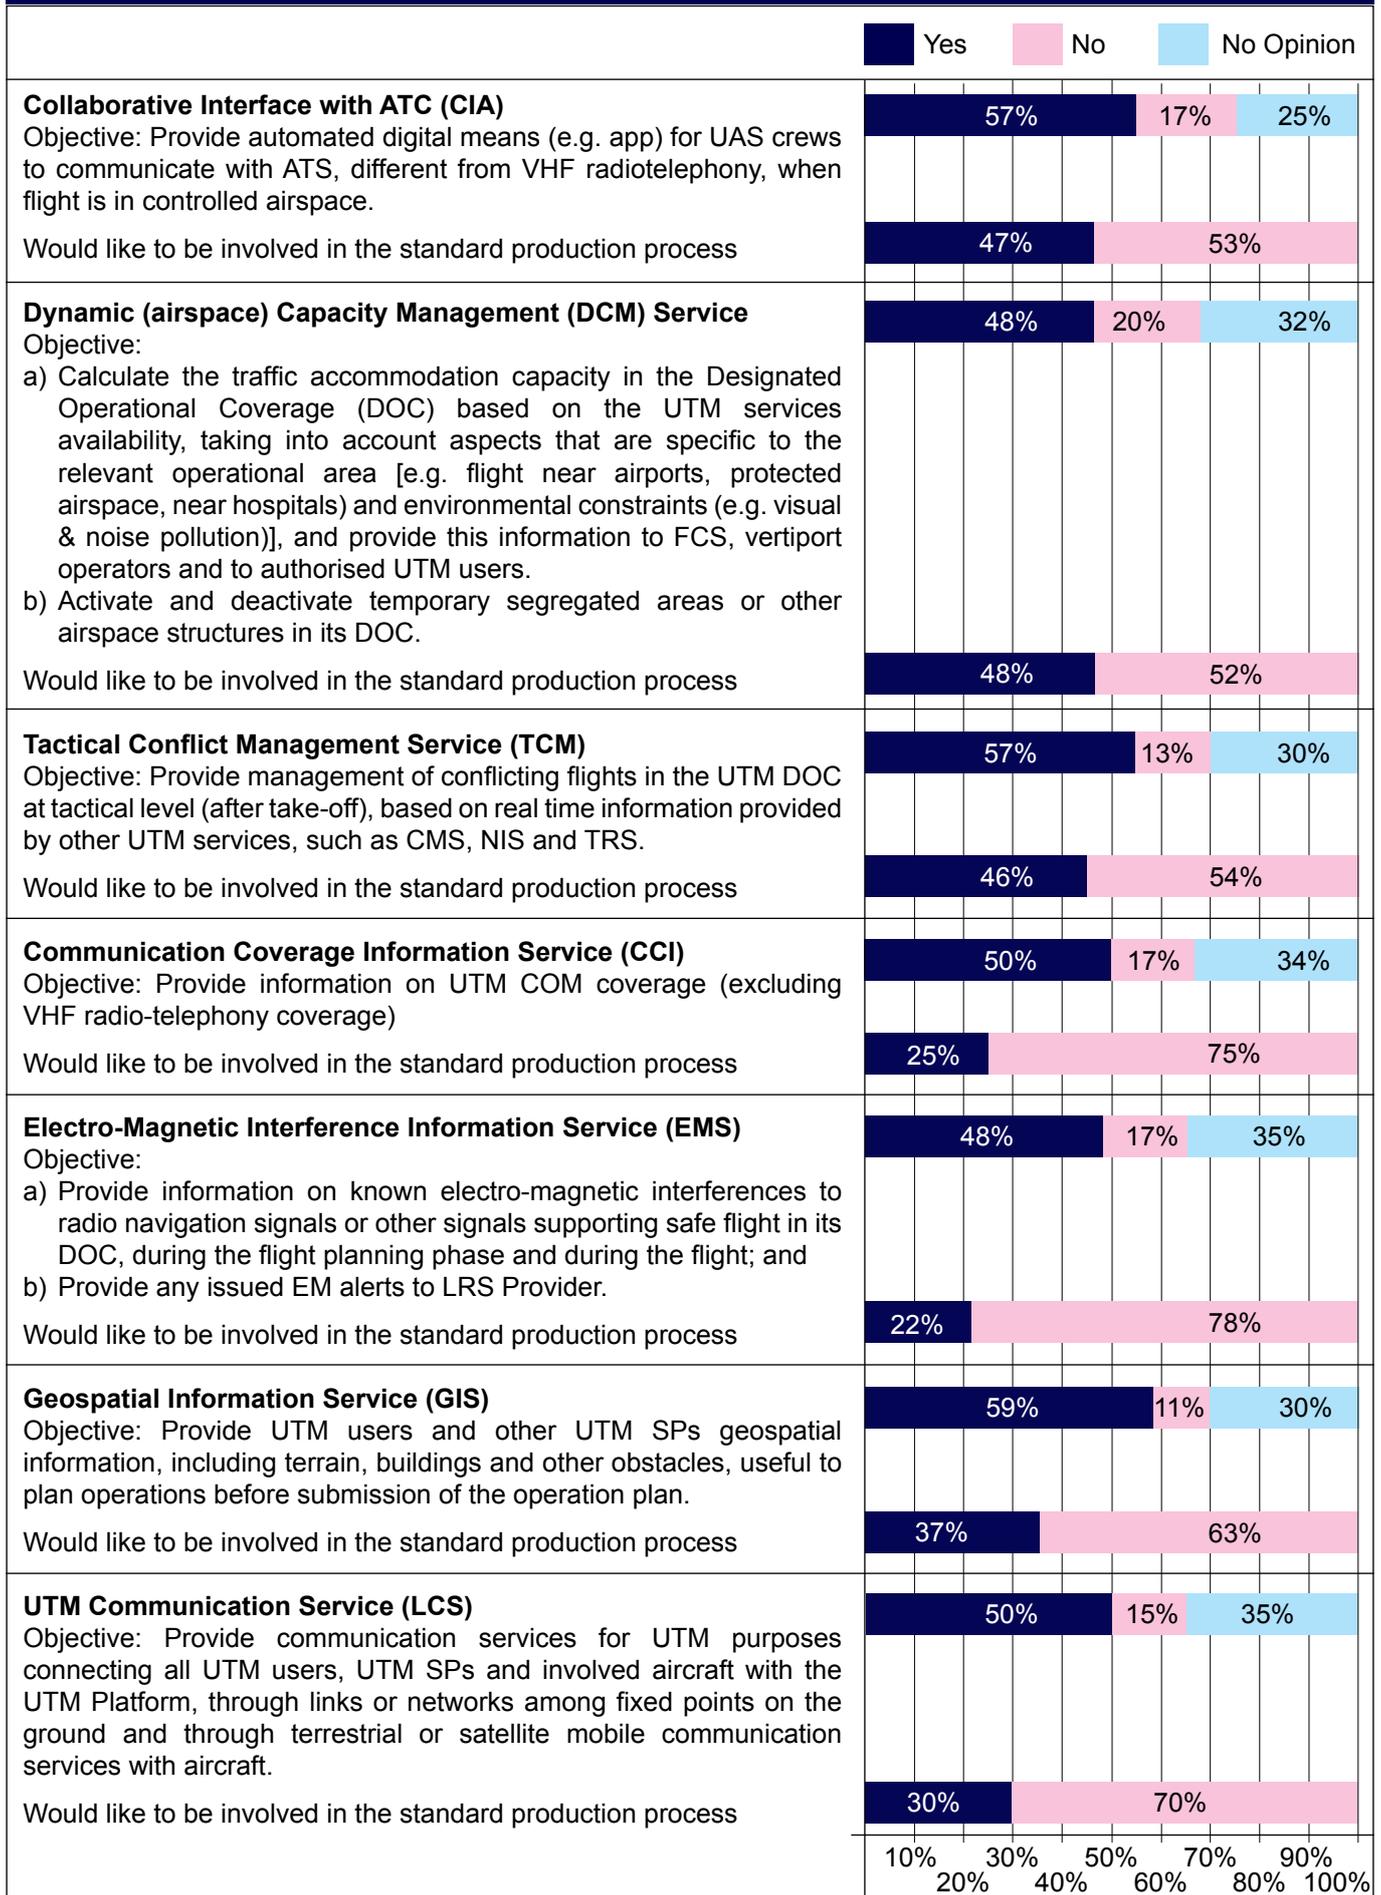

FIG. 26 - SUGGESTED ADDITIONAL EUROPEAN-WIDE STANDARDS

- 1 Accident/incident reporting
- 2 All the 30 UTM services in ISO 23629-12.
- 3 Area of Buffer dynamic calculation
- 4 ATS/ATC service provided by ANSP to UAS/U-space entities
- 5 ATM/UTM communications
- 6 ATM/UTM contingency management Radio emission power
- 7 Cross-border Interoperability or systems (avoiding national implementations)
- 8 Data exchange from different sources
- 9 Drone-to-Drone communication
- 10 Drone-to-Infrastructure Communication
- 11 eInsurance Card
- 12 ePilot Licence
- 13 GNSS use for drones (in particular EGNOS)
- 14 Human-Autonomy Teaming and Human-Machine Interactions
- 15 Night operations ie. lights
- 16 SMS communications
- 17 Surveillance observation
- 18 System design
- 19 UTM integration

FIG. 27 - IS THERE A REQUIREMENT FOR THE FOLLOWING (CURRENTLY NON-EXISTENT) STANDARDS UNDER CONSIDERATION BY ISO?

<p>UTM Route Design Service (URD) Objective: Design, document, validate, maintain and periodically review air routes necessary for the safety, regularity and efficiency of air navigation of unmanned aircraft in the UTM context.</p> <p>Would like to be involved in the standard production process</p>	
<p>Navigation Coverage Information Service (NCI) Objective: Provide information on coverage of radio navigation signals.</p> <p>Would like to be involved in the standard production process</p>	
<p>Population Density Information Service (PDI) Objective: Provide UAS operators, other UTM Service Providers (SPs) and competent authorities with static or dynamic maps on the density of population in each portion of its DOC.</p> <p>Would like to be involved in the standard production process</p>	
<p>Procedural Interface with ATC (PIA) Objective: Provide automated digital means (e.g. app) for UAS crews to communicate with ATS, different from VHF radiotelephony, when flight intends to enter controlled airspace, between submission of the operation plan and take-off.</p> <p>Would like to be involved in the standard production process</p>	
<p>Accident and Incident Reporting Service (ARS) Objective: Provide web-based tools to facilitate mandatory and voluntary reporting of safety, security or privacy related occurrences and transmits these reports to the involved organisation and to competent authorities.</p> <p>Would like to be involved in the standard production process</p>	
<p>Digital Logbook Service (DLB) Objectives: a) Provide UAS operators and their crews, web-based tools to log, as minimum, the information required by law or regulations to record the activity; and b) Collect and stores the logged information; and c) Distribute this information to involved operators, crews or competent authorities.</p> <p>Would like to be involved in the standard production process</p>	
<p>Maintenance Management (MMN) Objective: Provide UAS operators with web-based tools to support development & application of UAS Maintenance Programmes.</p> <p>Would like to be involved in the standard production process</p>	
<p>Operational Plan Preparation (OPP) Objective: Based on information provided by other UTM SPs, provide web-based tools to UAS operators for preparation and optimisation of the operation plan before submission.</p> <p>Would like to be involved in the standard production process</p>	
<p>Risk Analysis Assistance (RAA) Objective: Provide to UAS operators and to civil aviation authorities web-based tools to support development and evaluation of risk assessments prior to operations.</p> <p>Would like to be involved in the standard production process</p>

AW-DRONES

Harmonising drone standards to support the ongoing EU regulatory process

A reliable regulatory and standardisation framework for drones could generate potentially

 **100,000 jobs***

*European Drones Outlook Study, issued by SESAR

AW-Drones fosters the rulemaking process to enable safe and reliable civilian drones operations in the European Union. To this end, the project collects drone technical standards, rules and procedures already developed worldwide and assesses their compliance to EU regulatory requirements, showing the coverage of EASA's SORA and U-space regulatory requirements and airworthiness design, and in the end proposing a set of rules, technical standards and procedures for drone operations to comply with EU regulation.

The project will achieve this target through 2 sub-goals:

OBJECTIVES

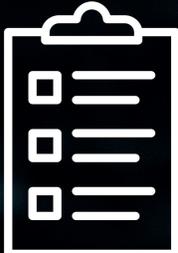

1

PROVIDING A REPOSITORY OF TECHNICAL STANDARDS AND "BEST PRACTICES" TO THE DRONE COMMUNITY.

The project has produced an Open Repository of existing standards and "best practices" to support the European Aviation Safety Agency and the European Commission in their rulemaking process.

2

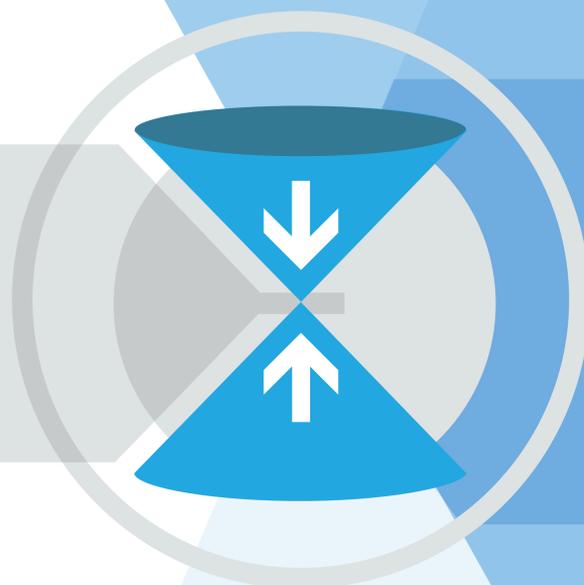

PROPOSING AND VALIDATING WITH RELEVANT STAKEHOLDERS A SET OF TECHNICAL STANDARDS TO COMPLY WITH EXISTING REGULATION FOR DRONE OPERATIONS.

AW-Drones will propose the most suitable technical standards for all relevant categories of drones operations.

METHODOLOGY

TOP-DOWN AND BOTTOM-UP APPROACH

In order to propose best practices and standards, AW-Drones adopts a twofold approach: a top-down collection and assessment of rules, procedures and standards already developed worldwide, and a bottom-up consultation with key stakeholders and end-users to ensure that standards are adequate and as agreed upon as possible to fulfill regulatory requirements.

MULTICRITERIA ANALYSIS

In order to assess the standards, AW-Drones adopts a Multi Criteria Analysis methodology, a tool used to compare and rank different options, especially when involving conflicting objectives. It is often used when the effects of an option on multiple aspects must be considered (for example, the effect of a proposed new regulation on safety, cost, the environment and society).

EASA uses Multiple Criteria Analysis in the Preliminary Rulemaking Impact Assessment.

The method used by AW-Drones is in line with the EASA pre-RIA method as well as with the guidelines for impact assessment provided by the European Commission (EC).

OUTCOMES

Aiding European aviation in conquering the challenges of drones

Recommended standards

For each requirement stemming from SORA, U-space regulations and the Special Condition Light-UAS, AW-Drones identified a set of recommended standards. Each standard has been assessed against a number of parameters to determine if it is suitable to be used as a Means of Compliance. Depending on the score of the supporting standard, each requirement is classified as:

- green if the recommended standards fully cover the requirement and their individual score is sufficiently high;
- yellow if the recommended standards do not fully cover the requirement or if their individual score is not sufficient to recommend them;
- red if the requirement is not covered by existing standard;
- no standard required.

Drone Standards Information Portal

The **Drones Standards Information Portal** is an open repository that collects the technical standards, published or under development, for the commercial use of drones worldwide that the project is collecting and assessing against existing and foreseen regulations. It is aimed at becoming a single point of access, offering relevant information about:

- 1 rules, procedures and technical standards developed for civilian drones.
- 2 information on standards' maturity level, coverage of regulation, and identified gaps.
- 3 technical standards for each category of drone operations.

Surveys on the operator's perspective of drones

During the last two years, AW-DRONES carried out two surveys with the aim to explore the drone operator's perspective of SORA and U-space.

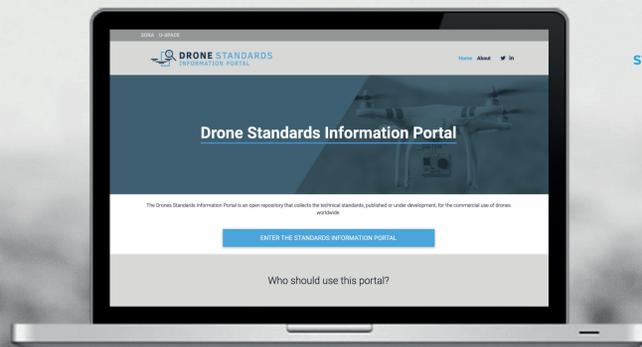

Put together with the assistance of experts with complementary expertise from various countries, the surveys meant to collect insight from the whole UAS community, including operators and manufacturers, also welcoming feedback from other aeronautical stakeholders. The surveys examined the current and near-future situation for multiple market sectors in the European UAS industry.

SORA Ground Risk Mitigations – Requirements coverage

REQUIREMENT	TITLE	ROBUSTNESS COVERAGE		
M1 - NON TETHERED	Strategic mitigations for ground risk	L	M	H
M1 - TETHERED	Strategic mitigations for ground risk	L	M	H
M2	Effects of UA impact dynamics are reduced	L	M	H
M3	An emergency Response Plan is in place, operator validated and effective	L	M	H

The AW-Drones final report will contain a synthesis of the results, with the above color-coding and a detailed assessment of all standards supporting each requirement.

Target: the tool benefits drones operators in the risk assessment and implementation of mitigations, and the European Aviation Safety Agency (EASA) and the European Commission (EC) in the rule-making process.

Scan the QR code to explore the portal standards.aw-drones.eu

The survey on the operator's perspective of SORA

In May 2020, AW-Drones launched a survey on the operator's perspective of SORA. The UAS OPS survey on drone operations & safety risk assessment gave the European drone operators community a chance to provide their opinion on current and future drone operational matters. It identified the market sectors in which drone flight operations were taking place in compliance with the applicable rules or regulations, and their mission purposes.

The survey on the operator's perception of U-Space

In April 2021, the project promoted another survey, meant to collect insight on U-space. After evaluating the comprehension of U-space in the Single European Sky (SES) Member State area, it assessed the knowledge level, expectations and concerns of the UAS community about U-space and its implementation. It also gathered opinions on the technical standards required to implement U-space and identified bottlenecks and gaps.
